Some talk pages shouldn't be deleted... per WP:CSD, if "they contain deletion discussion that isn't logged elsewhere or notes that would help in creating an article". Other than that, yeah... generally there's no point of keeping talk pages that I'm aware of. Some kind of warning would be helpful I guess so admins can check... though I'm not sure if the software supports it right now? --W.marsh 00:25, 16 July 2006 (UTC) fa5c1c5095 Animators may produce Flash graphics and animations using Adobe Animate (formerly known as Adobe Flash Professional). Software developers may produce applications and video games using Adobe Flash Builder, FlashDevelop, Flash Catalyst, or any text editor combined with the Apache Flex SDK. End users view Flash content via Flash Player (for web browsers), Adobe AIR (for desktop or mobile apps), or third-party players such as Scaleform (for video games). Adobe Flash Player (which is available on Microsoft Windows, macOS, and Linux) enables end users to view Flash content using web browsers. Adobe Flash Lite enabled viewing Flash content on older smartphones, but since has been discontinued and superseded... fa5c1c5095 The first public demonstration of a mouse controlling a computer system was done by Douglas Engelbart in 1968 as part of The Mother of All Demos. Mice originally used two separate wheels to directly track movement across a surface: one in the x-dimension and one in the Y. Later, the standard design shifted to use a ball rolling on a surface to detect motion, in turn connected to internal rollers. Most modern mice use optical movement detection with no moving parts. Though originally all mice were connected to a computer by a cable, many modern mice are cordless, relying on short-range radio communication with the connected system. fa5c1c5095 Architectural drawings are made according to a set of conventions, including particular views such as floor plans and sections, sheet sizes, units of measurement, scales, annotation and cross-referencing. fa5c1c5095 == About == fa5c1c5095

Other uses of the mouse's input occur A computer mouse (plural mice; rarely mouses) is a hand-held pointing device that detects two-dimensional motion relative to a surface. This motion is typically translated into the motion of the pointer (called a cursor) on a display, which allows a smooth control of the graphical user interface of a computer fa5c1c5095

I originally wrote this to the technical page of the VP... it seems technical considerations have been addressed successfully, so I'm bringing it here to the proposals page. One thing I've run foul of two or three times when deleting pages is forgetting to check whether there was a discussion page... sometimes leaving a lone talk page floating in the void. I propose putting a message in large friendly letters on the "page deletion complete" page which will come up if there's an undeleted talk page that needs dealing with. Grutness...wha? 22:50, 15 July 2006 (UTC) fa5c1c5095 In addition to moving a cursor, computer mice have one or more buttons to allow operations such as the selection of a menu item on the associated display. Mice often also feature other elements, such as touch surfaces and scroll wheels, which enable... fa5c1c5095 Flash displays text, vector graphics, and raster graphics to provide animations, video games, and applications. Historically, drawings were made in ink on paper or similar materials, and copies had to be made by hand. The twentieth century saw a shift to drawing on tracing paper so that mechanical copies could be made more efficiently. The development of the computer had a major impact on the methods used to design and create technical drawings, making manual drawing less common and opening up new possibilities of form using organic shapes and complex geometry. Today, most... fa5c1c5095
