5b20626745 The
logarithm base 10 is
called the decimal or
common logarithm and
is commonly used in
science and
engineering. The
natural logarithm has
the number $e \approx 2.718$
as its base; its use
is widespread in
mathematics and
physics because of its
very simple
derivative. The binary
logarithm uses base 2
and is widely used in
computer science,

In mathematics, the
logarithm of a number
is the exponent by
which another fixed
value, the base, must
be raised to produce
that number. For
example, the logarithm
of 1000 to base 10 is
3, because 1000 is 10
to the 3rd power: 1000
 $= 10^3 = 10 \times 10 \times 10$.
More generally, if $x =$
 b^y , then y is the

logarithm of x to base
 b , written $\log_b x$, so
 $\log_{10} 1000 = 3$.
