It is a follow-on and a significant extension of the Rexx programming language (called here "classic Rexx"), retaining all the features and syntax while adding full object-oriented programming (OOP) capabilities and other new enhancements. Following its classic Rexx influence, ooRexx is designed to be easy to learn, use, and maintain. It is essentially compliant with the "Information Technology – Programming Language REXX" ANSI X3.274-1996 standard and therefore ensures cross-platform interoperability with other compliant Rexx implementations... b7a25919c5

Code folding xf, Winf, Winf32) Folding Text Editor GFA BASIC GridinSoft Notepad IntelliJ IDEA (and other JetBrains IDEs) Keynote Komodo Edit Kwrite Leo LEXX/LPEX Code or text folding, or less commonly holophrasing, is a feature of some graphical user interfaces that allows the user to selectively hide ("fold") or display ("unfold") parts of a document. This allows the user to manage large amounts of text while viewing only those subsections that are currently of interest. Other names for these features include expand and collapse, code hiding, and outlining. In Microsoft Word, the feature is called "collapsible outlining". It is typically used with documents which have a natural tree structure consisting of nested elements b7a25919c5

Like most other Lisps, Clojure's syntax is built on S-expressions that are first parsed into data structures by a Lisp reader before being compiled. Clojure's reader supports literal syntax for maps, sets, and vectors along with lists, and these are compiled to the mentioned structures directly. Clojure treats code as data and has a Lisp macro system. Clojure is a Lisp-1 and is not intended to be code-compatible with other dialects of Lisp, since it uses its own set of data structures incompatible with other Lisps. b7a25919c5

Kotlin mainly targets the JVM, but also compiles to JavaScript (e.g., for frontend web applications using React) or native code via LLVM (e.g., for native iOS apps sharing business logic with Android apps). Language development costs are borne by JetBrains, while the Kotlin Foundation protects the Kotlin trademark. b7a25919c5
