Tests vary in style, rigor and requirements. There is no general consensus or invariable standard for test formats and difficulty. Often, the format and difficulty of the test is dependent upon the educational philosophy of the instructor, subject matter, class size, policy of the educational institution, and requirements of accreditation or governing bodies. 9635379751

Project-based learning authenticity or real-life application of the research. Students working as a team are given a "driving question" to respond to or answer, then directed Project-based learning is a teaching method that involves a dynamic classroom approach in which it is believed that students acquire a deeper knowledge through active exploration of real-world challenges and problems. Students learn about a subject by working for an extended period of time to investigate and respond to a complex question, challenge, or problem. It is a style of active learning and inquiry-based learning. Project-based learning contrasts with paper-based, rote memorization, or teacher-led instruction that presents established facts or portrays a smooth path to knowledge by instead posing questions, problems, or scenarios 9635379751

Conditional preservation of the saints A New Commentary, Workbook, Teaching Manual, 63). " This living union is captured in the simple command by Christ, "Remain in me, and I in. Arminians find the Scriptures describing both the initial act of faith in Christ, "whereby the relationship is effected", and the persevering faith in him "whereby the relationship is sustained. " The relationship of "the believer to Christ is never a static relationship existing as the irrevocable consequence of a past decision, act, or experience. David Aune, "St John's Portrait of the Church in The conditional preservation of the saints, or conditional perseverance of the saints, or commonly conditional security, is the Arminian Christian belief that believers are kept safe by God in their saving relationship with him upon the condition of a persevering faith in Christ. " Rather, it is a living union "proceeding upon a living faith in a living Savior. (James Strauss, The Seer, The Savior, and The Saved 9635379751

The PBL process was developed for medical education and has since been broadened in applications for other programs of learning. The process allows for learners to develop skills used for their future practice. It enhances critical appraisal, literature retrieval and encourages ongoing learning within a team environment. 9635379751 The property of being prime is called primality.  9635379751 The traditional or conventional approach to solving computing problems is either to build mathematical models or to use an IF- THEN -ELSE structure. For example, a

brute-force search is used in many chess engines, but this approach is computationally expensive and sometimes may arrive at poor solutions. It is for problems like this that lateral computing can be useful to form... 9635379751 Mathematicians and statisticians often work in a department of mathematical sciences (particularly... 9635379751 Statistics is both a formal science and a practical theory of scientific inquiry, and both aspects are considered in statistics education. Education in statistics has similar concerns as does education in other mathematical sciences, like logic, mathematics, and computer science. At the same time, statistics is concerned with evidence-based reasoning, particularly with the analysis of data. Therefore, education in statistics has strong similarities to education in empirical disciplines like psychology and chemistry, in which education is closely tied to "hands-on" experimentation. 9635379751 Lateral thinking has been made popular by Edward de Bono. This thinking technique is applied to generate creative ideas and solve problems. Similarly, by applying lateral-computing techniques to a problem, it can become much easier to arrive at a computationally inexpensive, easy to implement, efficient, innovative or unconventional solution. 9635379751

Problem-based learning A workbook developed by Joshua Farley, Jon Erickson, and Herman Daly organizes the Problem-based learning (PBL) is a teaching method in which students learn about a subject through the experience of solving an open-ended problem found in trigger material. This includes knowledge acquisition, enhanced group collaboration and communication. ecological economics has embraced problem-based learning as a core pedagogy. The PBL process does not focus on problem solving with a defined solution, but it allows for the development of other desirable skills and attributes 9635379751

Prime number However, 4 is composite because it is a product (2×2) in which both numbers are smaller than 4. Primes are central in number theory because of the fundamental theorem of arithmetic: every natural number greater than 1 is either a prime itself or can be factorized as a product of primes that is unique up to their order. If so, it answers yes and otherwise it answers no. For example, 5 is prime because the only ways of writing it as a product, 1×5 or 5×1 , involve 5 itself. A natural number greater than 1 that is not prime is called a composite number. $\{p\}$. If p really is prime, it will always answer yes, but if p A prime number (or a prime) is a natural number greater than 1 that is not a product of two smaller natural numbers 9635379751
