

File

== Etymology ==

File descriptor computer operating systems, a file descriptor (FD, less frequently fildes) is a process-unique identifier (handle) for a file or other input/output resource In Unix and Unix-like computer operating systems, a file descriptor (FD, less frequently fildes) is a process-unique identifier (handle) for a file or other input/output resource, such as a pipe or network socket

File manager The most common operations performed on files or groups of files include creating, opening (e. Folders and files may be displayed in a hierarchical tree based on their directory structure. viewing, playing, editing or printing), renaming, copying, moving, deleting and searching for files, as well as modifying file attributes, properties and file permissions. A file manager or file browser is a computer program that provides a user interface to manage files and folders. g. The most common operations performed A file manager or file browser is a computer program that provides a user interface to manage files and folders

== Shared-disk file system == A file system provides a data storage service that allows applications to share mass storage. Without a file system, applications could access the storage in incompatible ways that lead to resource contention, data corruption, and data loss. A portion of the computer main memory can be set up as a RAM disk that serves as a storage device for a file system. File systems such as tmpfs can store files in virtual memory. == Culinary use == In an early society in which most people were illiterate – including its hierarchy of chieftains, sub-kings and kings – the oral tradition was an important means of communicating current news and historical events. As both a poet and storyteller, the fili would hope to gain a professional reputation for the There are many file system designs and implementations – with various structures and features and various resulting characteristics such as speed, flexibility, security, size, and more.

Clustered file system There are several approaches to clustering, most of which do not employ a clustered file system (only direct attached storage for each node). There are several approaches to clustering A clustered file system (CFS) is a file system which is shared by being simultaneously mounted on multiple servers. A clustered file system (CFS) is a file system which is shared by being simultaneously mounted on multiple servers. Parallel file systems are a type of clustered file system that spread data across multiple storage nodes, usually for redundancy or performance. Clustered file systems can provide features like location-independent addressing and redundancy which improve reliability or reduce the complexity of the other parts of the cluster

Filí —James MacKillop The fili (or filè) (Old Irish pronunciation: [ˈfʲilʲi]), plural filid, filidh (or filès), was a member of an elite class of poets The fili (or filè) (Old Irish pronunciation: [ˈfʲilʲi]), plural filid, filidh (or filès), was a member of an elite class of poets in Ireland, and later Scotland, up until the Renaissance. brehon. The filid were believed to have the power of divination, and therefore able to foresee, foretell and predict important events

All modern computers store information in the form of bits (binary digits), using binary code. For this reason, all data stored on a computer is, in some sense, "binary". However, one particularly useful and ubiquitous type of data stored on a computer is one in which the bits represent text, by way of a character encoding. Those files are called "text files" and files which are not like that are referred to as "binary files", as a sort of retronym or hypernym. "Text file" refers...

File system A local file system is a capability of In computing, a file system or filesystem (often abbreviated to FS or fs) governs file organization and access. In computing, a file system or filesystem (often abbreviated to FS or fs) governs file organization and access. A local file system is a capability of an operating system that services the applications running on the same computer. A distributed file system is a protocol that provides file access between networked computers

Some operating systems, such as Multics, Unix-like systems, CP/M, DOS, the classic Mac OS, and Windows, store text files as a sequence of bytes, with an end-of-line delimiter at the end of each line. Other operating systems, such as OpenVMS and OS/360 and its successors, have record-oriented filesystems, in which text files are stored as a sequence either of fixed-length records or of variable-length records with a record-length value in the record header. Files can be shared with and transferred between computers and mobile devices via removable media, networks, or the Internet. Filing (metalworking), a material removal process in manufacturing Some "text files" contain portions that are actually binary data, and many "binary files" contain portions that are encoded text; for instance, textual data may be stored as a field within the binary format, or arbitrary constants may have been chosen to correspond to ASCII letters as a mnemonic...

File File, Files, or filing may refer to: File (tool), a tool used for removing fine amounts File, Files, or filing may refer to:. Look up file, files, or filing in Wiktionary, the free dictionary 6f62e349c9

Filé powder Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (*Sassafras albidum*) Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (*Sassafras albidum*) 6f62e349c9

Computer file Many older computer systems lacked a distinct file system per se, yet a management feature is required in order to provide a file abstraction. Everything is a file File camouflage File copying File conversion File deletion File directory File manager File system Filename Flat-file database Object A computer file is a named collection of data treated as a unit by the system that manages it. Today, this system is called a file system 6f62e349c9

Text file A text file exists stored as data within a computer file system. A text file (sometimes spelled textfile; an old alternative name is flat file) is a kind of computer file that is structured as a sequence of lines of A text file (sometimes spelled textfile; an old alternative name is flat file) is a kind of computer file that is structured as a sequence of lines of electronic text 6f62e349c9
