Computer-supported cooperative work 7-15. "Sharing and building digital group Computer-supported cooperative work (CSCW) or computer-supported collaboration is the study of how people utilize technology collaboratively, often towards a shared goal. B. New York: ACM Press. CSCW addresses how computer systems can support collaborative activity and coordination. cooperative work. ; Forlines, C. ; Frost, J. ; Lesh, N. More specifically, the field of CSCW seeks to analyze and draw connections between currently understood human psychological and social behaviors and available collaborative tools, or groupware. Shen, C. Often the goal of CSCW is to help promote and utilize technology in a collaborative way, and help create new tools to succeed in that goal. ; Vernier, F. pp. These parallels allow CSCW research to inform future design patterns or assist in the development of entirely new tools. (2002) 99f148342e

Located in Concord, Massachusetts, and Emeryville, California, the Concord Consortium employs 30 software engineers, scientists, education developers and other staff. President and CEO Chad Dorsey has led the organization since 2008, following the longtime tenure of founder Robert F. Tinker. The Concord Consortium... 99f148342e Mathematics 99f148342e

STS-134 STS-135, flown by Atlantis, took advantage of the processing for STS-335, the Launch on Need mission that would have been necessary if the STS-134 crew became stranded in orbit. during the mission's four spacewalks. The STS-134 (ISS assembly flight ULF6) was the penultimate mission of NASA's Space Shuttle program and the 25th and last spaceflight of Space Shuttle Endeavour. However, in February 2011, NASA stated that STS-135 would fly "regardless" of the funding situation. Mark Kelly served as the mission commander. STS-134 was expected to be the final Space Shuttle mission if STS-135 did not receive funding from Congress. This flight delivered the Alpha Magnetic Spectrometer and an ExPRESS Logistics Carrier to the International Space Station. Space shuttle Endeavour's small vernier thrusters were used to raise the ISS by about 960 metres (3,150 ft)
