The E53 X5 was developed just after the acquisition of Land Rover by BMW. As such, the vehicle shares many components and designs with both the Range Rover L322 model (specifically the hill descent system and off-road engine management system) and the BMW E39 5 Series (specifically engines and electronic systems). The entire in-car entertainment system (radio function, navigation system, television and telecommunications systems) are shared with other BMWs and L322. As a result, the earlier X5 models can be upgraded with newer BMW technologies (e.g. Bluetooth phone connectivity). 703f942569 BMW M ("M" for "motorsport") was initially created to facilitate BMW's racing program, which was very successful in the 1960s and 1970s. As time passed, BMW M began to supplement BMW's vehicle portfolio with specially modified higher trim models, for which they are now most known by the general public. These M-badged cars traditionally include modified engines, transmissions, suspensions, interior trims, aerodynamics, and exterior modifications to set them apart from their counterparts. All M models are tested and tuned at BMW's private facility at the Nürburgring racing circuit in Germany. 703f942569
