Interstate 495 (New York) and the Port Authority of New York and New Jersey (PANYNJ). East of the Queens–Midtown Tunnel, I-495 is known as the Long Island Expressway (LIE). Spanning Interstate 495 (I-495) is an auxiliary Interstate Highway in southeastern New York state. It is jointly maintained by the New York State Department of Transportation (NYSDOT), the New York City Department of Transportation (NYCDOT), MTA Bridges and Tunnels (TBTA), and the Port Authority of New York and New Jersey (PANYNJ). East of the Queens–Midtown Tunnel, I-495 is known as the Long Island Expressway (LIE)

Lie theory In mathematics, the mathematician Sophus Lie (/liː/ LEE) initiated lines of study involving integration of differential equations, automorphism groups

The LIE designation, despite being commonly applied to all of I-495 east of the Queens–Midtown Tunnel, technically refers to the stretch of highway in Nassau and Suffolk counties. The section from the Queens Midtown Tunnel to Queens Boulevard is known as the Queens Midtown Expressway, and the section between Queens Boulevard and the...

Lie group–Lie algebra correspondence In mathematics, Lie group–Lie algebra correspondence allows one to correspond a Lie group to a Lie algebra or vice versa, and study the conditions for

Lie algebra representation In the mathematical field of representation theory, a Lie algebra representation or representation of a Lie algebra is a way of writing a Lie algebra as

Lie group them into the circle group, an archetypal example of a Lie group. Lie groups In mathematics, a Lie group (pronounced Lee) is a group that is also a differentiable manifold, such that group multiplication and taking inverses are both differentiable. Lie groups are widely used in many parts of modern mathematics and physics

Spanning approximately 66 miles (106 km), I-495 traverses Long Island from the western portal of the Queens–Midtown Tunnel in the New York City borough of Manhattan to County Route 58 (CR 58) in Riverhead in the east. I-495 intersects with I-295 in Bayside, Queens, through which it connects with I-95. The 2017 route log erroneously shows the section of highway between I-278 in Long Island City and I-678 in Corona as New York State Route 495 (NY 495).

Simple Lie group a simple Lie group is a connected non-abelian Lie group G which does not have nontrivial connected normal subgroups. The list of simple Lie groups can

The Lie The Lie may refer to: The Lie (poem), c. 1592, political and social criticism poem probably written by Sir Walter Raleigh The Lie (novel), a 1970 novel The Lie may refer to:

Lie groups provide a natural model for the concept of continuous symmetry, a celebrated example of which is the circle group. Rotating a circle is an example of a continuous symmetry. For any rotation of the circle, there exists the same symmetry, and concatenation of such rotations makes them into the circle group, an archetypal example of a Lie group. Lie groups are widely used in many parts of modern mathematics and physics... A manifold is a space that locally resembles Euclidean space, whereas groups define the abstract concept of a binary operation along with the additional properties it must have to be thought of as a "transformation" in the abstract sense, for instance multiplication and the taking of inverses (to allow

division), or equivalently, the concept of addition and subtraction. Combining these two ideas, one obtains a continuous group where multiplying points and their inverses is continuous. If the multiplication and taking of inverses are smooth (differentiable) as well, one obtains a Lie group. 45ac7c1bb1
