professor in the Department of
Dermatology, Chang Gung
Memorial ... 78e0470ac1 Melanized
(Dematiaceous) Fungi . Dematiaceous
or melanized fungi have high
concentrations of melanin and
melaninlike pigments in their cell
walls causing a dark pigment .
Produce dusky brown to dark brown
pigment in the hyphae or conidia
cell walls . Both rapidly and slow
growing organisms seen . Conidia
vary in appearance from single to
multicelled . Some have both
melanized and hyaline hyphae, these
are considered to be hyaline molds
