Quantitative trait locus follow the same pattern as a simple monohybrid or dihybrid cross. QTLs are mapped by identifying which molecular markers (such as SNPs or AFLPs) correlate with an observed trait. If a genetic cause is suspected and little else is known about the illness, then it remains A quantitative trait locus (QTL) is a locus (section of DNA) that correlates with variation of a quantitative trait in the phenotype of a population of organisms. This is often an early step in identifying the actual genes that cause the trait variation a7289f6f53
