Hydrogen gas was first produced artificially in the 17th century by the reaction... 16c320198c Welcome to the Wikipedia Science Reference Desk Archives 16c320198c June 14 > 16c320198c

Time " is that it is not Time is the continuous progression of existence that occurs in an apparently irreversible succession from the past, through the present, and into the future. Time dictates all forms of action, age, and causality, being a component quantity of various measurements used to sequence events, to compare the duration of events (or the intervals between them), and to quantify rates of change of quantities in material reality or in the conscious experience. Time is often referred to as a fourth dimension, along with three spatial dimensions. to compare how long events last. Among philosophers of physics, the most popular short answer to the question "What is physical time 16c320198c

The six commonly recognised metalloids are boron, silicon, germanium, arsenic, antimony and tellurium. Five elements are less frequently so classified: carbon, aluminium, selenium, polonium and astatine. On a standard periodic table, all eleven elements are in a diagonal region of the p-block extending from boron at the upper left to astatine at lower right... 16c320198c November 23 > 16c320198c

Metalloid 56, no. 8, pp. There is no standard definition of a metalloid and no complete agreement on which elements are metalloids. 2337–40 A metalloid is a chemical element which has a preponderance of properties in between, or that are a mixture of, those of metals and nonmetals. The word metalloid comes from the Latin metallum ("metal") and the Greek oeides ("resembling in form or appearance"). Mohan M & Singh AK 1984, 'The Kinetics of Pressure-Induced Fcc-Bcc Transformation in Ytterbium'; Journal of Applied Physics, vol. Despite the lack of specificity, the term remains in use in the literature 16c320198c

Ozone Ozone is formed from dioxygen by the action of ultraviolet (UV) light and electrical discharges within the Earth's atmosphere. Hervé; Gunten, Urs von (2002). It is an allotrope of oxygen that is much less stable than the diatomic allotrope O₂, breaking down in the lower atmosphere to O₂ (dioxygen). Bibcode:2002WatRe Ozone (), also called trioxygen, is an inorganic molecule with the chemical formula O₃. It is present in very low concentrations throughout the atmosphere, with its highest concentration high in the ozone layer of the stratosphere, which absorbs most of the Sun's ultraviolet (UV) radiation. Water Research. It is a pale-blue

gas with a distinctively pungent odor. 36 (1): 65–74.

List of Ig Nobel Prize winners of the night, and then run away
 before anyone had a chance to answer the door. Commenting on
 the 2006 awards, Marc Abrahams, editor of Annals of Improbable
 Research and co-sponsor of the awards, said that "[t]he prizes
 are intended to celebrate the unusual, honor the imaginative,
 and spur people's interest in science, medicine, and
 technology". All prizes are awarded for real achievements,
 except for three in 1991 and one in 1994, due to an erroneous
 press release. Physics: Ivan Maksymov and Andriy Pototsky, of
 Swinburne University of A parody of the Nobel Prizes, the Ig
 Nobel Prizes are awarded each year in mid-September, around
 the time the recipients of the genuine Nobel Prizes are
 announced, for ten achievements that "first make people laugh,
 and then make them think" 16c320198c

Hydrogen (1998). doi:10. ed.] ed. , [Nachdr. Chemical kinetics (3. 1021/ar00162a004. Under standard conditions, hydrogen is a gas of diatomic molecules with the formula H_2 , called dihydrogen, or sometimes hydrogen gas, molecular hydrogen, or simply hydrogen. New York, NY: HarperCollins.). Dihydrogen is colorless, odorless, non-toxic, and highly combustible. (6): 218–222. Laidler, Keith J. Stars, including the Sun, mainly consist of hydrogen in a plasma state, while on Earth, hydrogen is found as the gas H_2 (dihydrogen) and in molecular forms, such as in water and organic compounds. It is the lightest and most abundant chemical element in the universe, constituting about 75% of all normal matter. The most common isotope of hydrogen (1H) consists of one proton, one electron, and no neutrons. ISBN 978-0-06-043862-3 Hydrogen is a chemical element; it has symbol H and atomic number 1

Wikipedia:Reference desk/Archives/Science/2013 November 22 theory we could contrive if we started with first principles of physics, solving the kinetics for one single gas molecule, and then extrapolating statistically Science desk
