

Apache Server 2 0 The Complete Reference

As of March 2025, Netcraft estimated that Apache served 17.83% of the million busiest websites, with the other top four being Cloudflare at 22.99%, nginx at 20.11%, and Microsoft Internet Information Services at 4.16%. According to W3Techs' review of all web sites, in April 2026 Apache was ranked third at 23.7% and nginx... 58471cf051 The vast majority of Apache HTTP Server instances run on a Linux distribution, but current versions also run on Microsoft Windows, OpenVMS, and a wide variety of Unix-like systems. Past versions also ran on NetWare, OS/2 and other operating systems, including ports to mainframes. 58471cf051 As a simple programming language, SSI supports only one type: text. Its control flow is rather simple, choice is supported, but loops are not natively supported and can only be done by recursion using include or using HTTP redirect. The simple design of the language makes it easier to learn and use... 58471cf051 == Uses == 58471cf051

Apache Accumulo According to DB-Engines ranking, Accumulo is the third most popular NoSQL wide column store behind Apache Cassandra and HBase and the 67th most popular database engine of any type (complete) as of 2018. on top of Apache Hadoop, Apache ZooKeeper, and Apache Thrift. It is a system built on top of Apache Hadoop, Apache ZooKeeper, and Apache Thrift. Written in Java, Accumulo has cell-level access labels and server-side programming mechanisms. Written in Java, Accumulo has cell-level access labels and server-side programming mechanisms Apache Accumulo is a highly scalable sorted, distributed key-value store based on Google's Bigtable 58471cf051

Originally based on the NCSA HTTPd server, development of Apache began in early 1995 after work on the NCSA code stalled. Apache played a key role in the initial growth of the World Wide Web, It quickly overtook NCSA HTTPd as the dominant web server software for HTTP. In 2009, it became the first web server software to serve more than 100 million websites. 58471cf051 Some common types of applications that use Velocity are: 58471cf051 The Mobile Web Server components include a gateway application that runs on a computer with Internet access and a connector application, that runs on the remote mobile device. The gateway and the connector applications with a valid DNS configuration can provide a mobile device with a global web address (URL). However, as of January 2010, the web server project has been discontinued by Nokia. 58471cf051 Nokia is one of the few cellphone companies that brought Apache HTTP Server to their line of Nokia cellphones, running Symbian OS S60 mobile software platform. The S60 Mobile Web Server enables connectivity for HTTP traffic to a mobile device from the Internet. 58471cf051

Active Server Pages 0 Option Pack (1996), it is included as a component of Windows Server (since the initial release of Windows 2000 Server). (IIS) via the Windows NT 4. There Active Server Pages (ASP) is Microsoft's first server-side scripting language and engine for dynamic web pages 58471cf051

To deploy and run Jakarta Server Pages, a compatible web server with a servlet container, such as Apache Tomcat or Jetty, is required. 58471cf051

Jakarta Server Pages To deploy and run Jakarta Server Pages, a compatible web server with a servlet container, such as Apache Tomcat Jakarta Server Pages (JSP; formerly JavaServer Pages) is a collection of technologies that helps software developers create dynamically generated web pages based on HTML, XML, SOAP, or other document types. Released in 1999 by Sun Microsystems, JSP is similar to PHP and ASP, but uses the Java programming language. but uses the Java programming language 58471cf051

Maven addresses two aspects of building software: how software is built and its dependencies. Unlike earlier tools like Apache Ant, it uses conventions for the build procedure. Only exceptions need to be specified. An XML file describes the software project being built, its dependencies on other external modules and components, the build order, directories, and required plug-ins. It comes with pre-defined targets for performing certain well-defined tasks such as compilation of code and its packaging. Maven dynamically downloads Java libraries and Maven plug-ins from one or more repositories such as the Maven 2 Central Repository, and stores them in a local cache. This local cache of downloaded artifacts can also be updated with artifacts created by local projects. Public repositories can also be updated. 58471cf051 On March 21, 2012, Accumulo graduated from incubation at Apache, making it a top-level project. 58471cf051 == Design == 58471cf051 Maven is built using a plugin-based architecture that allows it to make use of any application controllable... 58471cf051 == History == 58471cf051

Server Side Includes Apache Software Foundation. SSI also contains control directives for conditional features and directives for calling external programs. Apache HTTP Server Version 2. It has its roots in NCSA HTTPd. "mod_include". This could commonly be a common piece of code throughout a site, such as a page header, a page footer and a navigation menu. Apache HTTP Server Side Includes (SSI) is a simple interpreted server-side scripting language used almost exclusively for the World Wide Web. It is supported by Apache, LiteSpeed, nginx, IIS as well as W3C's Jigsaw. Retrieved 2021-09-07. It is most useful for including the contents of one or more files into a web page on a web server (see below), using its #include directive. 4 Documentation. "Apache Module mod_include"; 58471cf051

Mobile Web Server that brought Apache HTTP Server to their line of Nokia cellphones, running Symbian OS S60 mobile software platform. The S60 Mobile Web Server enables connectivity A Mobile Web Server is software designed for modern-day smartphones to host personal web servers through the use of open sourced software 58471cf051

Web server December 2021. 2". A user agent, commonly a web browser or web crawler, initiates communication by making a request for a web page or other resource using HTTP, and the server responds with the content of that resource or an error message. Apache: HTTPd server project. Retrieved 16 A web server is computer software that accepts requests via HTTP (the network protocol created to distribute web content) or its secure variant HTTPS. 2005. A web server can also accept and store resources sent from the user agent if configured to do so. "Overview of new features in Apache 2. Archived from the original on 27 November 2021 58471cf051

Apache Maven Maven addresses Maven is a build automation tool used primarily for Java projects. The Maven project is hosted by The Apache Software Foundation, where it was formerly part of the Jakarta Project. Maven can also be used to build and manage projects written in C#, Ruby, Scala, and other languages. The Maven project is hosted by The Apache Software Foundation, where it was formerly part of the Jakarta Project. Scala, and other languages 58471cf051

IBM WebSphere Application Server It is the flagship product within IBM's WebSphere software suite. done below the open standard specification line. More specifically, it is a software framework and middleware that hosts Java-based web applications. The first version was launched in 1998. It works with a number of Web servers including Apache HTTP Server, Netscape Enterprise Server, Microsoft WebSphere Application Server (WAS) is a software product that performs the role of a web application server. It was initially created by Donald F. Ferguson, who later became CTO of Software for Dell. This project was an offshoot from IBM HTTP Server team starting with the Domino Go web server 58471cf051

Initially released as an add-on to Internet Information Services (IIS) via the Windows NT 4.0 Option Pack (1996), it is included as a component of Windows Server (since the initial release of Windows 2000 Server). There have been three versions of ASP, each introduced with different versions of IIS: 58471cf051 A resource sent from a web server can be a pre-existing file (static content) available to the web server, or it can be generated at the time of the request (dynamic content) by another program that communicates with the server software. The former usually can be served faster and can be more easily cached for repeated requests, while the latter supports a broader range... 58471cf051 The Mobile Web Server application allows mobile devices a means for hosting personal web applications, including, web pages and server side control. The most commonly used HTTP servers and servlet containers currently available are Jetty, Tomcat, Glassfish and Resin. 58471cf051 Accumulo was created in 2008 by the US National Security Agency and contributed to the Apache Foundation as an incubator project in September 2011. 58471cf051

Apache Velocity It aims to ensure clean separation between the presentation tier and business tiers in a Web application (the model-view-controller design pattern). Apache Velocity first released in April 2001, is a Java-based template engine that provides a template language to reference objects defined in Java code Apache Velocity first released in April 2001, is a Java-based template engine that provides a template language to reference objects defined in Java code 58471cf051

== Architecture == 58471cf051 It works with a number of Web servers including Apache HTTP Server, Netscape Enterprise Server, Microsoft Internet Information Services (IIS), IBM HTTP Server for i5/OS, IBM HTTP Server for z/OS, and IBM HTTP Server for AIX/Linux/Microsoft Windows/Solaris... 58471cf051 In order for a web server to recognize an SSI-enabled HTML file and therefore carry out these instructions, either the filename should end with a special extension, by default .shtml, .stm, .shtm, or, if the server is configured to allow this, set the execution bit of the file. 58471cf051

Apache HTTP Server It is developed and maintained by a community of developers under the auspices of the Apache Software Foundation. It is developed and maintained The Apache HTTP Server is a free and open-source cross-platform web server, released under the terms of Apache License 2. The Apache HTTP Server is a free and open-source cross-platform web server, released under the terms of Apache License 2 58471cf051

== Examples == 58471cf051 WebSphere Application Server (WAS) is built using open standards such as Java EE, XML, and Web Services. It runs on the following platforms: Windows, AIX, Linux, Solaris, IBM i and z/OS. Beginning with Version 6.1 and now into Version 9.0, the open standard specifications are aligned and common across all the platforms. Platform exploitation, to the extent it takes place, is done below the open standard specification line. 58471cf051 Velocity is an open source software project hosted by the Apache Software Foundation. It is released under the Apache License. Jon Scott Stevens derived the name from the AltiVec Velocity Engine in the PowerPC G4 chip. 58471cf051 The hardware used to run a web server can vary according to the volume of requests that it needs to handle. At the low end of the range are embedded systems, such as a router that runs a small web server as its configuration interface. A high-traffic Internet website might handle requests with hundreds of servers that run on racks of high-speed computers. 58471cf051 == Overview == 58471cf051 It was first released in December 1996, before being superseded in January 2002 by ASP.NET. 58471cf051
