Human body temperature varies. It depends on sex, age, time of day, exertion level, health status (such as illness and menstruation), what part of the body the measurement is taken at, state of consciousness (waking, sleeping, sedated), and emotions. Body temperature is kept in the normal range by a homeostatic function known as thermoregulation, in which adjustment of temperature is triggered by the central nervous system. 740722adbd

Wilson's temperature syndrome Denis Wilson, a physician who invented the concept and named it after himself, treated these symptoms with sustained-release triiodothyronine (SR-T3) until one of his patients died and he was banned from prescribing this treatment any longer. PMID 18525042. Elsevier Health Sciences Wilson's temperature syndrome, also called Wilson's syndrome, Wilson's thyroid syndrome or WTS, is a term used in alternative medicine to improperly attribute various common and non-specific symptoms to abnormally low body temperature and impaired conversion of thyroxine (T4) to triiodothyronine (T3), despite normal thyroid function tests. The increase in set point triggers increased muscle contractions and causes a feeling of cold or chills. This results in greater heat production

and efforts to conserve heat. When the set point temperature returns to normal, a person feels hot, becomes flushed, and may begin to sweat. Rarely a fever may trigger a febrile seizure, with this being more common in young children. Fevers do not typically go higher than 41 to 42 °C... 740722adbd

Wilson's Syndrome is not an actual medical condition, and medical expert groups have warned against it as a potentially dangerous misunderstanding of physiology. The American Thyroid Association (ATA) released an... 740722adbd Originally filmed in true three-lens Cinerama with the accompanying three-panel panorama projected onto an enormous curved screen, the film features an ensemble cast formed by many cinema icons and newcomers, including (in alphabetical order) Carroll Baker, Lee J. Cobb, Henry Fonda, Carolyn Jones, Karl Malden, Gregory Peck,... 740722adbd The most common causes include heat stroke and adverse reactions to drugs. Heat stroke is an acute temperature elevation caused by exposure to excessive heat, or combination of heat and humidity, that overwhelms the heat-regulating mechanisms of the body. The latter is a relatively rare side effect of many drugs, particularly those that affect the central nervous system... 740722adbd

Hyperthermia 1056/NEJMoa0706930. PMID 18525042. Almost half a million deaths are recorded every year from hyperthermia. When extreme temperature elevation occurs, it becomes a medical emergency requiring immediate treatment to prevent disability or death. Physiotherapy for Respiratory and Cardiac Problems: Adults and Paediatrics. Pryor JA, Prasad AS (2008). The person's body produces or absorbs more heat than it dissipates. Elsevier Health Sciences Hyperthermia, also known as overheating, is a condition in which an individual's body temperature is elevated beyond normal due to failed thermoregulation 740722adbd

Hypothermia has two main types of causes. It classically occurs from exposure to cold weather and cold water immersion. It may also occur from any condition that decreases heat production or increases heat loss. Commonly, this includes alcohol intoxication but may also include low blood sugar, anorexia, and advanced age. Body temperature is usually maintained near a constant level... 740722adbd
