of south India and northern Sri Lanka. The vegetation now consists of

Vachellia nilotica It is native to Africa, the Middle East and the Indian subcontinent. It is also considered a 'weed of national significance' and an invasive species of concern in Australia, as well as a noxious weed by the federal government of the United States. The *Vachellia nilotica*, more commonly known as *Acacia nilotica*, and by the vernacular names of gum arabic tree, babul, thorn mimosa, Egyptian acacia or thorny acacia, is a flowering tree in the family Fabaceae. which may come from the ancient Greek word ἄκισ, *ákis*, 'thorn', for its characteristic thorns, or may have been borrowed from a pre-Greek language

mainly of southern tropical thorn scrub type forests. These consist of open woodland with thorny trees with short trunks and low, branching crowns; spiny and xerophytic shrubs; and dry grassland. This is the habitat of the great Indian bustard and blackbuck, though these and other animals are declining in numbers; this area was at one time home to large numbers of elephants and tigers. Almost 350 species of bird have been recorded here. The remaining natural habitat is threatened by overgrazing and invasive weeds, but there are a number of small protected...

Every Rose Has Its Thorn 13 on the UK Singles chart. Ahh. A power ballad, it was released in October 1988 as the third single from their second studio album *Open Up and Say*. It

also peaked at No. 11 on the Mainstream Rock chart, and No. 1 hit in the US, topping the Billboard Hot 100 for three weeks, starting on December 24, 1988. A power ballad, it was released in October 1988 as the third single from their "Every Rose Has Its Thorn" is a song by American glam metal band Poison. The band's signature song, it was their only No. 1 hit.

Crown of Thorns (woodworking) Common examples include wreath-shaped picture frames that look similar to Jesus' "crown of thorns". The Crown of Thorns (puzzle work) is a woodworking technique of tramp art using interlocking wooden pieces that are notched to intersect at right angles.

The Crown of Thorns (puzzle work) is a woodworking technique of tramp art using interlocking wooden pieces that are notched to intersect at right angles forming joints and self-supporting objects, objects that have a "prickly" and transparent quality.

Datura innoxia When English botanist Philip Miller first described the species in 1768, he misspelled the Latin word *innoxia* (inoffensive) when naming it *D.* The name *Datura meteloides* was for some time erroneously applied to some members of the species,. It is more rarely called sacred datura, a common name which is applied more often to the closely related *Datura wrightii*. 5 metres. It is native to the Southwestern United States, Central and South America, and introduced in Africa, Asia, Australia and Europe. Its stems and leaves are covered with short and soft grayish hairs,

giving the whole plant a grayish appearance. It has elliptic *Datura innoxia* (often spelled *inoxia*), known as pricklyburr, recurved thorn-apple, downy thorn-apple, Indian-apple, lovache, moonflower, nacazcul, toloatzin, toloaxihuitl, tolguache or toloache, is a species of flowering plant in the family Solanaceae. The scientific name is often cited as *D. innoxia*. 6 to 1. *inoxia*. height of 0 5e69feb63f

A. planci has a very wide Indo-Pacific distribution. It is perhaps most common around Australia, but can occur at tropical and subtropical latitudes from the Red Sea and the East African coast across the Indian Ocean, and across the Pacific Ocean to the west coast of Central America. It occurs where coral reefs or hard coral communities occur in the region. 5e69feb63f

Corallivore Known corallivores include certain mollusks, annelids, fish, crustaceans, flatworms and echinoderms. species feed on soft coral. There are no known obligate soft coral feeder; soft coral is estimated to be a small percentage of the diet of soft coral feeders A corallivore is a carnivorous animal that feeds on coral. Corallivores are an important group of reef organism because they can influence coral abundance, distribution, and community structure. The first recorded evidence of corallivory was presented by Charles Darwin in 1842 during his voyage on HMS Beagle in which he found coral in the stomach of two *Scarus* parrotfish.

Corallivores feed on coral using a variety of unique adaptations and strategies 5e69feb63f

Larger-scale crowns may use the principles of tensegrity structures, where the wooden sticks provide rigidity and separate cables in tension carry the forces that hold them together. 5e69feb63f

Acanthaster brevispinus planici, the common crown-of-thorns starfish Acanthaster brevispinus, the short-spined crown-of-thorns starfish, is one of the two members of the starfish genus Acanthaster, along with the much better-known A. crown-of-thorns starfish, is one of the two members of the starfish genus Acanthaster, along with the much better-known A. planici, the common crown-of-thorns starfish 5e69feb63f

Holy Thorn Reliquary The reliquary was The Holy Thorn Reliquary was probably created in the 1390s in Paris for John, Duke of Berry, to house a relic of the Crown of Thorns. The reliquary was bequeathed to the British Museum in 1898 by Ferdinand de Rothschild as part of the Waddesdon Bequest. It is one of a small number of major goldsmiths' works or joyaux that survive from the extravagant world of the courts of the Valois royal family around 1400. The Holy Thorn Reliquary was probably created in the 1390s in Paris for John, Duke of Berry, to house a relic of the Crown of Thorns. It is made of gold, lavishly decorated with jewels and pearls, and uses the technique of enamelling en ronde bosse, or "in the round", which had been recently developed when the reliquary was made, to create a total of 28 three-dimensional figures, mostly in white enamel 5e69feb63f

Thorn-tailed rayadito It remains the most common and best-known native bird in temperate forests of Zona Austral and Zona Sur in Chile, often occurring at densities of well over one individual per hectare. Some sources suggest it may formerly have occurred in the Falkland Islands. tsii. It is found in temperate forests and subtropical dry shrubland south of 30°S. tsii" A softer repetitive trill "trrrrrreet" The thorn-tailed rayadito (*Aphrastura spinicauda*) is a species of bird in the family Furnariidae. Typical voices of the thorn-tailed rayadito include: A loud trill An alarm call, described as a scolding "tsii 5e69feb63f
