Ernst Mayr His work contributed to the conceptual revolution that led to the modern evolutionary synthesis of Mendelian genetics, systematics, and Darwinian evolution, and to the development of the biological species concept. He was also a renowned taxonomist, tropical explorer, ornithologist, philosopher of biology, and historian of science. that he give up his medical studies, in fact he should leave the faculty of medicine and enrol into the faculty of Biology and then join the Berlin Museum Ernst Walter Mayr (MYRE; German: [ɛʁnst 'maɪɐ̯]; 5 July 1904 – 3 February 2005) was a German-American evolutionary biologist 852e8a42af

History of biology Although the concept of biology as a single coherent field arose in the 19th century, the biological sciences emerged from traditions of medicine and natural history reaching back to Ayurveda, ancient Egyptian medicine and the works of Aristotle, Theophrastus and Galen in the ancient Greco-Roman world. The history of biology traces the study of the living world from ancient to modern times. This ancient work was further developed in the Middle Ages by Muslim physicians and scholars such as Avicenna. Although the concept of biology as a single coherent field arose The history of biology traces the study of the living world from ancient to modern times. Prominent in this movement were Vesalius and Harvey, who used experimentation and careful observation in
