A dessin d'enfant is a graph, with its vertices colored alternately black and white, embedded in an oriented surface that, in many cases, is simply a plane. For the coloring to exist, the graph must be bipartite. The faces of the embedding are required to be topological disks. The surface and the embedding may be described combinatorially using a rotation system, a cyclic order of the edges surrounding each vertex of the graph...

Quantum chaos 00585. 96 (9): 094204. arXiv:1710. If quantum mechanics does not demonstrate an exponential sensitivity to initial conditions, how can exponential sensitivity to initial conditions arise in classical chaos. Bibcode:2017PhRvB. "Controllable quantum scars in semiconductor quantum dots". The correspondence principle states that classical mechanics is the classical limit of quantum mechanics, specifically in the limit as the ratio of the Planck constant to the action of the system tends to zero. Physical Review B. If this is true, then there must be quantum mechanisms underlying classical chaos (although this may not be a fruitful way of examining classical chaos). 96i4204K. (2017-09-20). doi:10 Quantum chaos is a branch of physics focused on how chaotic classical dynamical systems can be described in terms of quantum theory. The primary question that quantum chaos seeks to answer is: "What is the relationship between quantum mechanics and classical chaos

The medical standard for active TB is a short course treatment involving a combination of isoniazid, rifampicin (also known as Rifampin), pyrazinamide, and ethambutol for the first two months. During this initial period, Isoniazid is taken alongside pyridoxal phosphate to obviate peripheral neuropathy. Isoniazid is then taken concurrently with rifampicin for the remaining four months of treatment (6-8 months for miliary tuberculosis). A patient is expected to be free from all living TB bacteria after six months of therapy in Pulmonary TB or 8-10 months in Miliary TB. Instead of magnetic disks for fixed and removable storage, the RoadRunner relied on CMOS RAM and ROM cartridges for storing and loading data and software. The laptop was equipped with a CP/M-compatible operating system in its built-in ROM, as well as an address book and a scheduler that took advantage of the laptop's ability to keep time with its real-time clock. An external modem allowed it to communicate with a mainframe and wake-on-ring to submit data remotely and automatically...
