Bi-fuel vehicle On internal combustion engines, a bi-fuel engine typically burns gasoline and a volatile alternate fuel such as natural gas (CNG), LPG, or hydrogen. Diesel engines converted to use gaseous fuels fall into this class due to the different ignition system. The two fuels are stored in separate tanks and the engine runs on one fuel at a time. A related concept is the dual-fuel vehicle which must burn both fuels in combination. Bi-fuel vehicles switch between gasoline and the other fuel, manually or automatically.
