In 1921, NJM began providing insurance for property loss, commercial auto accidents, private automobiles, and homes. This differs from traditional insurance, which attempts to differentiate and reward "safe" drivers, giving them lower premiums and/or a no-claims bonus. However, conventional differentiation is a reflection of history rather than present patterns of behaviour. This means that it may take a long time before safer (or more reckless) patterns of driving and changes in lifestyle feed through into premiums.

Widespread use of the motor car began after the First World War in urban areas. Cars were relatively fast and dangerous by that stage, yet there was still

no compulsory form of car insurance anywhere in the world. This meant that injured victims would rarely get any compensation in a crash, and drivers often faced considerable costs for damage to their car and property. Progressive was formed in 1937 by attorneys Jack Green and Joseph M. Lewis in Cleveland, Ohio, as Progressive Mutual Insurance Company. In 1956, the company found a niche by insuring more risky drivers. In 1965, Peter B. Lewis, son of Joseph Lewis, and his mother borrowed \$2.5 million, pledging their majority stake as collateral, and completed a leveraged buyout of Progressive. In 1971, Progressive conducted an initial public offering (IPO) and became a publicly-traded company. In 1987, the sum of the company's written premiums surpassed... The simplest form of usage-based insurance bases the insurance costs simply on distance driven. However, the general concept of pay as you drive includes any scheme where the insurance costs may depend not just on how much you drive but how, where, and when one drives. Pay as you drive (PAYD) means that the insurance premium is calculated dynamically, typically according to the amount driven. == Concept == 6c4f18d62f Text summarization is usually implemented by natural language processing methods, designed to locate the most informative sentences in a given document. On the other hand, visual content can be summarized using computer vision algorithms. Image summarization is the subject of ongoing research; existing approaches typically attempt to display the most representative images from a given image collection, or generate a video that only includes the most important content from the entire collection. Video summarization algorithms identify and extract from the original video content the most important frames (key-frames), and/or the most important video segments (key-shots), normally in a temporally ordered fashion. Video summaries simply retain a carefully selected subset of the original video frames and, therefore, are not identical to the output of video... 6c4f18d62f
