Since some of these names may be used for more than one language (e.g. Sungai), caution is required when creating redirects for them. They may also be for the wrong language: An ISO code may have been split without all the secondary names following properly, and secondary names are commonly misidentified in the first place. (E.g., Muak Sa-aak and Tailoi are not the same language.) Red links should therefore not be converted to redirects without verification.

See also Category:Glottolog languages that correspond to more than one Wikipedia article. 70906ee20a The bare ISO names are linked, without 'language' appended. That means that some links will lead to dab pages or even to the wrong article, some of which might not have a hatnote redirect. (For very short names (1–3 letters), this is being checked on the talk page.) By appending 'language', all names should link to the correct WP article. (This was checked for all names except

those that have a date or a word for 'language' in them, as those would be unlikely redirects.) 70906ee20a

Da:galag and various spellings of Bushman languages like ||Auo create problems for the links. Other names are redundant (e.g. 'language' appended to the link name despite 'creole' or 'language' earlier in the name).
