Gastric emptying study Scintigraphy that uses gamma cameras to create two-dimensional images is generally regarded as the gold standard for gastric emptying. It may be used if there are complications after gastric surgery, for gastric reflux, or suspected gastroparesis amongst other indications. Cystography Arthrogram Hysterosalpingography Skeletal survey Angiography Angiocardiology Aortography Venography Lymphogram Orbital x-ray CT scan Techniques A gastric emptying study is a nuclear medicine study which provides an assessment of the stomach's ability to empty 075355076a

Diffusion-weighted magnetic resonance imaging Cystography Arthrogram Hysterosalpingography Skeletal survey Angiography Angiocardiology Aortography Venography Lymphogram Orbital x-ray CT scan Techniques Diffusion-weighted magnetic resonance imaging (DWI or DW-MRI) is the use of specific MRI sequences as well as software that generates images from the resulting data that uses the diffusion of water molecules to generate contrast in MR images. Water molecule diffusion patterns can therefore reveal microscopic details about tissue architecture, either normal or in a diseased state. It allows the mapping of the diffusion process of molecules, mainly water, in biological tissues, in vivo and non-invasively. Molecular diffusion in tissues is not random, but reflects interactions with many obstacles, such as macromolecules, fibers, and membranes. A special kind of DWI, diffusion

tensor imaging (DTI), has been used extensively to map white matter tractography in the brain

DMSA scan A DMSA scan is usually static imaging, while other radiotracers like DTPA and MAG3 are usually used for dynamic imaging to assess renal excretion. Radioactive technetium-99m is combined with DMSA and injected into a patient, followed by imaging with a gamma camera after 2-3 hours. Cystography Arthrograph Hysterosalpingography Skeletal survey Angiography Angiocardiology Aortography Venography Lymphogram Orbital x-ray CT scan Techniques A DMSA scan is a radionuclide scan that uses dimercaptosuccinic acid (DMSA) in assessing renal morphology, structure and function 075355076a
