List of datasets for machine-learning research 2000). Major advances in this field can result from advances in learning algorithms (such as deep learning), computer hardware, and, less-intuitively, the availability of high-quality training datasets. Although they do not need to be labeled, high-quality datasets for unsupervised learning can also be difficult and costly to produce. Datasets are an integral part of the field of machine learning. High-quality labeled training datasets for supervised and semi-supervised machine learning algorithms are usually difficult and expensive to produce because of the large amount of time needed to label the data. Circulation. 101 (23): E215-20 These datasets are used in machine learning (ML) research and have been cited in peer-reviewed academic journals. Privacy concerns with social networking services The extent to which users and social media platform administrators can access user profiles has become a new topic of ethical consideration, and the legality, awareness, and boundaries of subsequent privacy violations are critical concerns in advance of the technological age. In 2010, investigation Since the arrival of early social networking sites in the early 2000s, online social networking platforms have expanded exponentially, with the biggest names in social media in the mid-2010s being Facebook, Instagram, Twitter and Snapchat. concept of a worldwide communicative network seems to adhere to the public sphere model, market forces control access to such a resource. The massive influx of personal information that has become available online and stored in the cloud has put user privacy at the forefront of discussion regarding the database's ability to safely store such personal information

Applications of artificial intelligence The subfield of Machine learning has been used for various scientific and commercial purposes including language translation, image recognition, decision-making, credit scoring, and e-commerce. targeting intelligence collection and analysis, logistics, cyber operations, information operations, and semiautonomous and autonomous vehicles. In recent years, there have been massive advancements in the field of Generative Artificial Intelligence, which uses generative models to produce text, images, videos or other forms of data. AI technologies Artificial intelligence is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. Within the field of Artificial Intelligence, there are multiple subfields. Artificial intelligence (AI) has been used in applications throughout industry and academia. This article describes applications of
