This rook attack can occur preemptively by moving the rook before the opponent's pawn push and, thus, preventing (at least initially) the opponent from opening the bishop's diagonal. This option is known as Cat's Rook on Pawn (猫の歩兵 neko no tatefudori). Hosking calls this Floating Rook Cat Variation. Or, the rook can attack the pawn after it has been pushed forward and the bishop's diagonal is already open, forcing the opponent to respond to protect that pawn. This drop rule is speculated to have been invented in the 15th century and possibly connected to the practice of 15th-century mercenaries switching loyalties when captured instead of being killed. c5d29bbd82 One possible aim of Twisting Rook is to achieve an offensive structure similar to the attacking formation used in an Ishida opening. c5d29bbd82 In the adjacent board diagram, both Black and White have created Reclining Silver positions.
