Vector space Scalars can also be, more generally, elements of any field.), John Wiley & Sons Artin, Michael (1991), Algebra, Prentice In mathematics and physics, a vector space (also called a linear space) is a set whose elements, often called vectors, can be added together and multiplied ("scaled") by numbers called scalars. Real vector spaces and complex vector spaces are kinds of vector spaces based on different kinds of scalars: real numbers and complex numbers. Anton, Howard; Rorres, Chris (2010), Elementary Linear Algebra: Applications

Anton Howard Elementary Linear Algebra 10th Edition

Version (10th ed. The operations of vector addition and scalar multiplication must satisfy certain requirements, called vector axioms

This glossary of computer science
is a list of definitions of terms and
concepts used in computer
science, its sub-disciplines, and
related fields, including terms
relevant to software, data science,
and computer programming.
Anton, Howard (1987), Elementary
Linear Algebra (5th ed 5c675d41c9

Vector spaces generalize Euclidean
vectors, which allow modeling of
physical quantities (such as forces
and velocity) that have not only a
magnitude, but also a direction.
The concept of vector spaces is
fundamental for linear algebra,

together with the concept of
matrices, which allows...

5c675d41c9 c 5c675d41c9

Elementary algebra is the main
form of algebra taught in schools. It
examines mathematical
statements using variables for
unspecified values and seeks to
determine for which values the
statements are true. To do so, it
uses different methods of
transforming equations to isolate
variables. Linear algebra is a
closely related field that
investigates linear equations and
combinations of them called
systems of linear equations. It
provides methods to find the
values that... 5c675d41c9

Originally called infinitesimal
calculus or "the calculus of
infinitesimals", it has two major
branches, differential calculus and
integral calculus. The former
concerns instantaneous rates of
change, and the slopes of curves,
while the latter concerns
accumulation of quantities, and
areas under or between curves.

These two branches are related to
