The concept of force is central to all three of Newton's laws of motion. Types of forces often encountered in classical mechanics include elastic, frictional, contact or "normal" forces, and gravitational. The rotational version of force is torque, which produces changes in the rotational speed of an object. In an extended body... 94aedbcf63

History of physics Kenneth Krane's Modern physics begins a text on quantum and relativity theories with a few pages on deficiencies of classical physics. T. These topics were discussed across many cultures in ancient times by philosophers, but they had no means to distinguish causes of natural phenomena from superstitions.
