Find My Mac) and Find My Friends into a single app. Users can also show their primary device's geographic location to others, and can view the location of others who choose to share their location. On WatchOS, Find My is separated into three different applications: Find Devices, Find People and Find Items Find My is an asset tracking service made by Apple that enables users to track the location of iOS, iPadOS, MacOS, WatchOS, VisionOS devices, AirPods, AirTags, and a number of supported third-party accessories with the Find My Network Accessory Program through a connected iCloud account. Find My was released alongside iOS 13 on September 19, 2019, merging the functions of the former Find My iPhone (known on Mac computers as Find My Mac) and Find My Friends into a single app. On WatchOS, Find My is separated into three different applications: Find Devices, Find People and Find Items 30bbf71750

In August 2013, the initial service only allowed Android devices to be found. In April 2024 an expanded Find My Device network launched, enabling the crowdsourcing of data from Android phones & tablets to assist in finding other devices on the network via Bluetooth. This has allowed for offline finding, as well as support for more items on the service, such as tracker tags initially from Chipolo and Pebblebee. These trackers are marked as supporting Google's Find My Device network via a badge on their product marketing. The Find My Device network was

announced in Google I/O 2023, to be released in July in the same year, before being delayed awaiting a new industry specification aimed to prevent unwanted tracking. A draft of this specification was released in December 2023, and has been implemented in iOS 17.5. 30bbf71750 == Computing == 30bbf71750
