Game theory Hearn, Robert A. ; Demaine, Erik D. pp. In the 1950s, it was extended to the study of non zero-sum games, and was eventually applied to a wide range of behavioral relations. It is now an umbrella term for the science of rational decision making in humans, animals, and computers. Tic-Tac-Toe Theory. (2009), Games, Puzzles, and Computation, A Game theory is the study of mathematical models of strategic interactions. Initially, game theory addressed two-person zero-sum games, in which a participant's gains or losses are exactly balanced by the losses and gains of the other participant. 1–3. ISBN 978-0-521-46100-9. It has applications in many fields of social science, and is used extensively in economics, logic, systems science and computer science. Cambridge University Press

Texas City refinery explosion All the fatalities were contractors working out of temporary buildings located close to the unit to support turnaround activities. Property loss was \$200 million (\$322 million in 2024). It resulted in the killing of 15 workers, 180 injuries and severe damage to the refinery. required positive materials verification using an X-ray fluorescence test device and maintained or required the contractor to maintain materials identification On March 23, 2005, a hydrocarbon vapor cloud ignited and violently exploded at the isomerization process unit of the BP-owned oil refinery in Texas City, Texas. When including settlements (\$2. 1 billion), costs of repairs, deferred production, and fines, the explosion is the world's costliest refinery accident

Chromatography The mixture is dissolved in a fluid solvent (gas or liquid) called the mobile phase, which carries it through a system (a column, a capillary tube, a plate, or a sheet) on which a material called the stationary phase is fixed. The separation is based on the differential partitioning between the mobile and the stationary phases. Stainless steel and glass are the usual materials for packed columns In chemical analysis, chromatography is a laboratory technique for the separation of a mixture into its components. them. Subtle differences in a compound's partition. As the different constituents of the mixture tend to have different affinities for the stationary phase and are retained for different lengths of time depending on their interactions with its surface sites, the constituents travel at different apparent velocities in the mobile fluid, causing them to separate. Both types of column are made from non-adsorbent and chemically inert materials
