Graph database Retrieved 2016-11-02. Retrieved 2026-04-29. Querying relationships is fast because they are perpetually stored in the database. Graph databases hold the relationships between data as a priority. The relationships allow data in the store to be linked together directly and, in many cases, retrieved with one operation. Gosnell, Denise; Broecheler A graph database (GDB) is a database that uses graph structures for semantic queries with nodes, edges, and properties to represent and store data. Apache TinkerPop. ISO. The graph relates the data items in the store to a collection of nodes and edges, the edges representing the relationships between the nodes. "Apache TinkerPop",. "ISO/IEC 39075:2024",. A key concept of the system is the graph (or edge or relationship). TinkerPop, Apache. Relationships can be intuitively visualized using graph databases, making them useful for heavily inter-

== History == e78d4f2210 Bigtable development began in 2004. It is now used by a number of Google applications, such as Google Analytics, web indexing, MapReduce, which is often used for generating and modifying data stored in Bigtable, Google Maps, Google Books search, "My Search History", Google Earth, Blogger.com, Google Code hosting, YouTube, and Gmail. Google's reasons for developing its own database include scalability and better control of performance characteristics. e78d4f2210 Graph databases are commonly referred to as a NoSQL database. Graph databases are similar to 1970s network model databases in that both represent general graphs, but network-model databases operate at a lower level of abstraction and lack easy traversal over a chain of edges. e78d4f2210 The underlying storage mechanism of graph databases can vary. Relationships are first-class citizens in a graph database and can be labeled, directed, and given properties... e78d4f2210 As of April 2024, Bigtable manages over 10 Exabytes of data and serves more than 7 billion requests per second. Since its launch, Google announced a number of updates to Bigtable, including SQL support, incremental materialized views, global secondary indexes and automated scalability.... e78d4f2210
