On the Origin of Species The book presented a body of evidence that the diversity of life arose by common descent through a branching pattern of evolution. Darwin's book introduced the scientific theory that populations evolve over the course of generations through a process of natural selection, although Lamarckism was also included as a mechanism of lesser importance. Chapter XII continues On the Origin of Species (or, more completely, On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life) is a work of scientific literature by Charles Darwin that is considered to be the foundation of evolutionary biology. It was published on 24 November 1859. Darwin included evidence that he had collected on the Beagle expedition in the 1830s and his subsequent findings from research, correspondence. discussed ways that species could be dispersed across oceans to colonise islands, many of which he had investigated experimentally
