The PBL process was developed for medical education and has since been broadened in applications for other programs of learning. The process allows for learners to develop skills used for their future practice. It enhances critical appraisal, literature retrieval and encourages ongoing learning within a team environment. 113423141f

Computer chess to solve ordinary 8x8 chess. Computer chess provides opportunities for players to practice even in the absence of human opponents, and also provides opportunities for analysis, entertainment and training. Stockfish, Leela Chess Zero, GNU Chess, Fruit, and other free open source applications are available for various platforms. Standalone chess-playing machines are also available. Computer chess applications that play at the level of a chess grandmaster or higher are available on hardware from supercomputers to smart phones. Martin Gardner's Minichess, played on a 5×5 board with approximately 1018 possible board positions, has been solved; its Computer chess includes both hardware (dedicated computers) and software capable of playing chess 113423141f

Project-based learning Students learn about a subject by working for an extended period of time to investigate and respond to a complex question, challenge, or problem. It is a style of active learning and inquiry-based learning. asking them to solve specific (open-ended) problems rather than relying on students to come up with their own problems in the course of completing a project Project-based learning is a teaching method that involves a dynamic classroom approach in which it is believed that students acquire a deeper knowledge through active exploration of real-world challenges and problems. Project-based learning contrasts with paper-based, rote memorization, or teacher-led instruction that presents established facts or portrays a smooth path to knowledge by instead posing questions, problems, or scenarios 113423141f

Space Shuttle thermal protection system the entire orbiter surface, and consisted of seven different materials in varying locations based on amount of required heat protection: Reinforced carbon-carbon The Space Shuttle thermal protection system (TPS) is the barrier that protected the Space Shuttle Orbiter during the extreme 1,650 °C (3,000 °F) heat of atmospheric reentry. A secondary goal was to protect from the heat and cold of space while in orbit 113423141f

Problem-based learning This includes knowledge acquisition, enhanced group collaboration and communication. The PBL process does not focus on problem solving with a defined solution, but it allows for the development of other desirable skills and attributes.); to Problem-based learning (PBL) is a teaching method in which students learn about a subject through the experience of solving an open-ended problem found in trigger material. introduction of problems to be solved. They propose other forms of learning early in the learning process (worked example, goal free problems, etc 113423141f

Karl Popper Popper was opposed to the classical justificationist account of knowledge, which he replaced with "the first non-justificational philosophy of criticism. One of the 20th century's most influential philosophers of science, Popper is known for his rejection of the classical inductivist views on the scientific method in favour of empirical falsification made possible by his falsifiability criterion, and for founding the Department of Philosophy at the London School of Economics and Political Science. He states that while there is no way to prove Sir Karl Raimund Popper (28 July 1902 – 17 September 1994) was an Austrian-British philosopher, academic and social commentator. Among his contributions to philosophy is his claim to have solved the philosophical problem of induction. According to Popper, a theory in the empirical sciences can never be proven, but it can be falsified, meaning that it can (and should) be scrutinised with decisive experiments 113423141f

Identification friend or foe IFF is used by both military and civilian aircraft. It enables military and civilian air traffic control interrogation systems to identify aircraft, vehicles or forces as friendly, as opposed to neutral or hostile, and to determine their bearing and range from the interrogator. Mark II was technically complete as the war began, but a lack of sets meant it was Identification, friend or foe (IFF) is a combat identification system designed for command and control. automatic gain control solved the problem of it sending out too much signal. IFF systems usually use radar frequencies, but other electromagnetic frequencies, radio or infrared, may be used. IFF was first developed during World War II, with the arrival of radar, and several friendly fire incidents. It uses a transponder that listens for an interrogation signal and then sends a response that identifies the broadcaster 113423141f

LS-DYNA LS-DYNA is used by the automobile, aerospace, construction and civil engineering, military, manufacturing, and bioengineering industries. While the package continues to contain more and more possibilities for the calculation of many complex, real world problems, its origins and core-competency lie in highly nonlinear transient dynamic finite element analysis (FEA) using explicit time integration. contain more and more possibilities for the calculation of many complex, real world problems, its origins and core-competency lie in highly nonlinear LS-DYNA is an advanced general-purpose multiphysics simulation software package developed by the former Livermore Software Technology

Construction of the Egyptian pyramids with materials of less strength than historical analogs (tested with materials weaker than those available in ancient Egypt), a factor of safety of 2, and The construction of the Egyptian pyramids can be explained with well-established scientific facts; however, there are some aspects that even today are considered controversial hypotheses. Disagreements chiefly concern the methods used to move and place the stones. It is believed that huge stones were carved from quarries with copper tools, and these blocks were then dragged and lifted into position. The construction techniques used seem to have developed over time; later pyramids were not constructed in the same way as earlier ones 113423141f

Conflict management Properly managed conflict can improve group outcomes. Dialogue Between Individuals by Gregorio Billikopf, free complete book PDF download, at the University of California (3rd Edition, posted 24 March 2014) Party-Directed Conflict management is the process of limiting the negative aspects of conflict while increasing the positive aspects of conflict in the workplace. The aim of conflict management is to enhance learning and group outcomes, including effectiveness or performance in an organizational setting 113423141f
