Human factors in diving equipment design The underwater diver relies on various items of diving and support equipment to stay alive, healthy and reasonably comfortable and to perform planned tasks during a dive. Divers may communicate by rope signals, but may just use the line to attract attention before moving closer and communicating by hand signals. The Human factors in diving equipment design are the influences of the interactions between the user and equipment in the design of diving equipment and diving support equipment. signals 0bdd669a19

They had two children, Bindi and Robert. 0bdd669a19 Divers vary considerably in anthropometric dimensions, physical strength, joint flexibility, and other factors. Diving equipment should be versatile and chosen to fit the diver, the environment, and the task. How well the overall design achieves a fit between equipment and diver can strongly influence its functionality. Diving support equipment is usually shared by a wide range of divers and must work for them all. When correct operation of equipment... 0bdd669a19
