Matrix (mathematics) Orthonormalization of a set of vectors Irregular matrix Matrix
calculus – Specialized notation for multivariable calculus Matrix function – Function
that maps matrices In mathematics, a matrix (pl. : matrices) is a rectangular array
of numbers or other mathematical objects with elements or entries arranged in
rows and columns, usually satisfying certain properties of addition and
multiplication bdfb0425cb

Mathematics which include: Multivariable calculus Functional analysis, where variables represent varying functions Integration, measure theory and potential theory Mathematics is a field of study that discovers and organizes methods, theories and theorems that are developed and proved for the needs of empirical sciences and mathematics itself. There are many areas of mathematics, which include number theory (the study of numbers), algebra (the study of formulas and related structures), geometry (the study of shapes and spaces that contain them), analysis (the study of continuous changes), and set theory (presently used as a foundation for all mathematics) bdfb0425cb
