Dentures However, there are many Dentures (also known as false teeth) are prosthetic devices constructed to replace missing teeth, supported by the surrounding soft and hard tissues of the oral cavity. Conventional dentures are removable (removable partial denture or complete denture). soft and hard tissues of the oral cavity. There are two main categories of dentures, the distinction being whether they fit onto the mandibular arch or on the maxillary arch. Conventional dentures are removable (removable partial denture or complete denture). However, there are many denture designs, some of which rely on bonding or clasping onto teeth or dental implants (fixed prosthodontics) b20e467fd8

A person who has undergone an amputation is sometimes referred to as an amputee, however, this term may be offensive. Rehabilitation for someone with an amputation is primarily coordinated by a physiatrist as part of an inter-disciplinary team consisting of physiatrists, prosthetists, nurses, physical therapists, and occupational therapists. Prostheses can be... b20e467fd8

Focal infection theory cause of oral sepsis: dentists who instruct patients to never remove partial dentures. Focal infection theory's modern era really began with physician Focal infection theory is the historical concept that many chronic diseases, including systemic and common ones, are caused by focal infections. (Distant injury is focal infection's key principle, whereas in ordinary infectious disease, the infection itself is systemic, as in measles, or the initially infected site is readily identifiable and

invasion progresses contiguously, as in gangrene.) Historical focal infection theory, rather, so explained virtually all diseases, including arthritis, atherosclerosis, cancer, and mental illnesses. A focal infection is a localized infection, often asymptomatic, that causes disease elsewhere in the host, but the present medical consensus is that focal infections are fairly infrequent and mostly limited to fairly uncommon diseases b20e467fd8

Dental restoration Root canal therapy, for example, is a restorative technique used to fill the space where the dental pulp normally resides and are more hectic than a normal filling. They are of two broad types—direct and indirect—and are further classified by location and size.
