Multi-exposure HDR capture Some smartphones provide HDR modes for their cameras, and most In photography and videography, multi-exposure HDR capture is a technique that creates high dynamic range (HDR) images (or extended dynamic range images) by taking and combining multiple exposures of the same subject matter at different exposures. Many smartphones have an automated HDR feature that relies on computational imaging techniques to capture and combine multiple exposures. Combining multiple images in this way results in an image with a greater dynamic range than what would be possible by taking one single image. The term "HDR" is used frequently to refer to the process of creating HDR images from multiple exposures. The technique can also be used to capture video by taking and combining multiple exposures for each frame of the video. image as it comes from the sensor, with the emphasis being on creating a realistic effect 25bc1e73f3

A 3D scanner can be based on many different technologies, each with its own limitations, advantages and costs. Many limitations in the kind of objects that can be digitized are still present. For example, optical technology may encounter difficulties with dark, shiny, reflective or transparent objects while industrial computed tomography scanning, structured-light 3D scanners, LiDAR and Time Of Flight 3D Scanners can be used to construct digital 3D models, without destructive testing. 25bc1e73f3

Parachuting [citation needed] In order to justify the presence Parachuting and skydiving are methods of descending from a high point in an atmosphere to the ground or ocean surface with the aid of gravity, involving the control of speed during the descent using a parachute or multiple parachutes. several very uncommon metallic parts and cables, all of which could trigger scanners of the security screening 25bc1e73f3

This is an example of a regular volumetric grid, with each volume element, or voxel represented by a single value that is obtained by sampling the immediate area surrounding the voxel. 25bc1e73f3 A person who has undergone an amputation is sometimes referred to as an amputee, however, this term may be offensive. Rehabilitation for someone with an amputation is primarily coordinated by a physiatrist as part of an inter-disciplinary team consisting of physiatrists, prosthetists, nurses, physical therapists, and occupational therapists. Prostheses can be... 25bc1e73f3 Until the advent of such technology, photographs were made by exposing light-sensitive photographic film and paper, which was processed in liquid chemical solutions to develop and stabilize the image. Digital photographs are typically created solely by computer-based photoelectric and mechanical...

The game consists of a series of missions in which the player controls a team of cybernetically modified agents attempting to take control of a particular country. The agents must frequently overcome local police forces and heavily armed agents from rival syndicates to achieve mission objectives, which range from assassinations to capture or rescue of personnel. Agent armaments, cybernetic modifications... A single image captured by a camera provides a... In cargo parachuting, the parachute descent may begin immediately, such as a parachute-airdrop in the lower atmosphere of Earth, or it may be significantly delayed. For example, in a planetary atmosphere, where an object is descending "under parachute" following atmospheric entry from space, may occur only after the hypersonic entry phase and initial deceleration that occurs due...

3D scanning color). g. A 3D scanner can be based on many different technologies, each with its own limitations 3D scanning is the process of analyzing a real-world object or environment to collect three dimensional data of its shape and possibly its appearance (e. The collected data can then be used to construct digital 3D models. The collected data can then be used to construct digital 3D models

Usually these are acquired in a regular pattern (e.g., one slice for each millimeter of depth) and usually have a regular number of image pixels in a regular pattern. Collected 3D data is useful for a wide variety of applications. These devices are... For human skydiving, there is often a phase of free fall (the skydiving segment), where the parachute has not yet been deployed and the body gradually accelerates to terminal velocity.

Digital photography Flash: using flash in images can provide a different look such as the Digital photography uses cameras containing arrays of electronic photodetectors interfaced to an analog-to-digital converter (ADC) to produce images focused by a lens, as opposed to an exposure on photographic film. file from a memory card vs many minutes to scan film with a high-quality scanner. It is a form of digital imaging based on gathering visible light (or for scientific instruments, light in various ranges of the electromagnetic spectrum). The digitized image is stored as a computer file ready for further digital processing, viewing, electronic publishing, or digital printing 25bc1e73f3
