Computer mouse Other uses of the mouse's input occur A computer mouse (plural mice; rarely mouses) is a hand-held pointing device that detects two-dimensional motion relative to a surface. This motion is typically translated into the motion of the pointer (called a cursor) on a display, which allows a smooth control of the graphical user interface of a computer. 20th century, digitizer mice (puck) with magnifying glass was used with AutoCAD for the digitizations of blueprints 4d240ed463

Cyber espionage Cyber espionage can be used to target various actors – individuals, competitors, rivals, groups, governments, and others – in order to obtain personal, economic, political or military advantages. Capture location: GPS, Cyber espionage, cyber spying, or cyber-collection is the act or practice of obtaining secrets and information without the permission and knowledge of the holder of the information using methods on the Internet, networks or individual computers through the use of proxy servers, cracking techniques and malicious software including Trojan horses and spyware. interest, these are often documents, spreadsheets, design files such as Autocad files and system files such as the passwd file. It may wholly be perpetrated online from computer desks of professionals on bases in far away countries or may involve infiltration at home by computer trained conventional spies and moles or in other cases may be the criminal handiwork of amateur malicious hackers and software programmers 4d240ed463

The twentieth century saw a shift to drawing on tracing paper so that mechanical copies could be made more efficiently. The development of the computer had a major impact on the methods used to design and create technical drawings, making manual drawing less common and opening up new possibilities of form using organic shapes and complex geometry. Today, most... 4d240ed463 The first public demonstration of a mouse controlling a computer system was done by Douglas Engelbart in 1968 as part of The Mother of All Demos. Mice originally used

two separate wheels to directly track movement across a surface: one in the x-dimension and one in the Y. Later, the standard design shifted to use a ball rolling on a surface to detect motion, in turn connected to internal rollers. Most modern mice use optical movement detection with no moving parts. Though originally all mice were connected to a computer by a cable, many modern mice are cordless, relying on short-range radio communication with the connected system.
