Aristotle, Theophrastus and Galen in the ancient Greco-Roman world. produce fossils. This ancient work was further developed in the Middle Ages by Muslim physicians and scholars such as Avicenna. During the European Renaissance and early modern period, biological thought was revolutionized in Europe by a renewed interest in empiricism and the discovery of many novel organisms. Although Steno's ideas about fossilization were well known and much debated among natural philosophers, an organic origin for all fossils would The history of biology traces the study of the living world from ancient to modern times. Prominent in this movement were Vesalius and Harvey, who used experimentation and careful observation in

Irreducible complexity
This negative argument is
then complemented by the
claim that the only
alternative explanation is
a "purposeful arrangement
of parts" inferring design
by an intelligent agent.
Irreducible. Heredity
Irreducible complexity
(IC) is the argument that
certain biological systems
with multiple interacting
parts would not function
if one of the parts were
removed, so supposedly
could not have evolved by
successive small
modifications from earlier
less complex systems
through natural selection,
which would need all
intermediate precursor
systems to have been fully
functional. Irreducible
complexity has become
central to the creationist
concept of intelligent

Sustainable energy
Renewable energy sources such as wind, hydro, solar, and geothermal energy can cause environmental damage but are generally far more sustainable than fossil fuel sources. of land-use change, cultivation, and processing can result in higher overall carbon emissions for bioenergy compared to using fossil fuels. These impacts range from greenhouse gas emissions and air pollution to energy poverty and toxic waste. " Definitions of sustainable energy usually look at its effects on the

William C f7f090da16

Although humans have always been interested in the natural history of the animals they saw around them, and used this knowledge to domesticate certain species, the formal study of zoology can be said to have originated with Aristotle. He viewed animals as living organisms, studied their structure and development, and considered their adaptations to their surroundings and the function of their parts... f7f090da16 In ancient times, Xenophanes (570–480 BC), Herodotus (484–425 BC), Eratosthenes (276–194 BC), and Strabo (64 BC–24 AD) wrote about fossils of marine organisms, indicating that land was once under water.
