Commonly known types of carbon are diamond and graphite. In 1947, Canadian physicist P. R. Wallace suggested carbon would also exist in sheets. German chemist Hanns-Peter Boehm and coworkers isolated single sheets from graphite, giving them the name graphene in 1986. In 2004, the material was characterized by Andre Geim and Konstantin Novoselov at the University of Manchester, England. They received the 2010 Nobel Prize in Physics for their experiments. c8769cc568

Graphene paints and coatings, lubricants, oils and functional fluids, capacitors and batteries, thermal management applications, display materials and packaging Graphene () is a variety of the element carbon which occurs naturally in small amounts. When many hundreds of graphene layers build up, they are called graphite. In graphene, the carbon forms a sheet of interlocked atoms as hexagons one carbon atom thick. The result resembles the face of a honeycomb c8769cc568

Download the file enwiki-YYYYMMDD-pages-articles.xml.bz2 from the most recent dump. For example, on your.org, go to directory YYYYMMDD for the most recent date (for example 20171020), and retrieve the requested file (for example enwiki-20171020-pages-articles.xml.bz2). c8769cc568 ListCheckWiki enwiki-\$-pages-articles.xml.bz2 wiki:Wikipedia:CHECKWIKI/WPC_{0}_dump 1148A c8769cc568 2022-12-29 via PetScan c8769cc568
