Artificial turf It is much more durable than grass and easily maintained without irrigation or trimming, although periodic cleaning is required.

Disadvantages include increased risk of injury especially when used in athletic competition, as well as health and environmental concerns about the petroleum and toxic chemicals used in its manufacture. Artificial turf is a surface of synthetic fibers made to look like natural grass, used in sports arenas, residential lawns and commercial applications that traditionally use grass. Stadiums that are substantially covered and/or at high latitudes often use artificial turf, as they typically lack enough sunlight for photosynthesis and substitutes for solar radiation are prohibitively expensive and energy-intensive. Kole, Pieter Jan; Löhr, Ansje J. application of sewage sludge. ; Van Belleghem, Frank G. ; Van Belleghem, Frank; Ragas, Ad; Kole, Pieter Jan; Löhr, Ansje J ef1df64788

Applications of artificial intelligence The subfield of Machine learning has been used for various scientific and commercial purposes including language translation, image recognition, decision-making, credit scoring, and e-commerce. Within the field of Artificial Intelligence, there are multiple subfields. Artificial Intelligence and Legal Analytics. (2017). doi:10. I. ISBN 978-1-107-17150-3. [page needed] Lohr, Steve (19 March 2017). In recent years, there have been massive advancements in the field of Generative Artificial Intelligence, which uses generative models to produce text, images, videos or other forms of data. 1017/9781316761380. "A. This article describes applications of. Artificial intelligence is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. Artificial intelligence (AI) has been used in applications throughout industry and academia ef1df64788

Sharon Lohr Her research interests include survey

sampling, design of experiments, and applications of statistics in education and criminology. She is an Emeritus Dean's Distinguished Professor of Statistics at Arizona State University, and an independent statistical consultant. Lohr graduated from Calvin College Sharon Lynn Lohr is an American statistician. interests include survey sampling, design of experiments, and applications of statistics in education and criminology ef1df64788

Design effect The design effect is a positive In survey research, the design effect is a number that shows how well a sample of people may represent a larger group of people for a specific measure of interest (such as the mean). important when the sample comes from a sampling method that is different than just picking people using a simple random sample. This is important when the sample comes from a sampling method that is different than just picking people using a simple random sample ef1df64788

List of women in statistics public health statistician Sharon Lohr, American statistician, applies survey sampling and design of experiments to education and criminology Wendy Lou, Canadian This is a list of women who have made noteworthy contributions to or achievements in statistics ef1df64788

Ming T. Tsuang ; Liu, Xiaohua; Pazol, Joel; Woelk, Christopher H. ; Ming Tso Tsuang (Chinese: 冏冏冏; pinyin: Zhuāng Míngzhé; born November 16, 1931) is an American psychiatrist and Distinguished Professor of Psychiatry at the University of California, San Diego. ; Chandler, Sharon D. ; Lohr, James B. ; Nievergelt, Caroline M. Tsuang has authored and co-authored more than 600 publications and serves as founding and senior editor of the American Journal of Medical Genetics Part B. He is considered a pioneering researcher in

the genetic epidemiology of schizophrenia and other severe mental disorders. Tylee, Daniel S. ; Kremen, William S

Each observation measures one or more properties (such as weight, location, colour or... $\{\text{Deff}\}=1$ Survey samples can be broadly divided into... The design effect is a positive real number, represented by the symbol $\{\text{Deff}\}$

National Firefighter Registry for Cancer fire service through collecting relevant occupational, lifestyle, and health information on firefighters. S. It aims to use these data to reduce cancer in firefighters. Guerra; Saber, Anne Thoustrup; Clausen, Per Axel; Pedersen, Julie Elbæk; Løhr, Mille; Kermanizadeh, Ali; Loft, Steffen; Ebbenhøj, Niels; Hansen, Åse Marie; The National Firefighter Registry for Cancer (NFR) is a voluntary registry of firefighters in the United States used to evaluate cancer rates and risk factors in the U

The NFR was created by the Firefighter Cancer Registry Act of 2018 in response to growing evidence of carcinogenic exposures and increased risk for cancer faced by firefighters. It opened to registration by firefighters in April 2023. The NFR is maintained by the U.S. National Institute for Occupational Safety and Health (NIOSH) but was shut down by the Trump administration in April 2025.

Sampling (statistics) Sampling: Design and analysis. Model Assisted Survey Sampling. Särndal, Carl-Erik; Swensson, Bengt; Wretman, Jan. The subset is meant to reflect the whole population, and statisticians attempt to collect samples that are representative of the population. Lohr, Sharon L. Sampling has lower costs and faster data collection compared to recording data from the entire

population (in many cases, collecting the whole population is impossible, like getting sizes of all stars in the universe), and thus, it can provide insights in cases where it is infeasible to measure an entire population. ISBN 978-0470465462. Scheaffer In this statistics, quality assurance, and survey methodology, sampling is the selection of a subset or a statistical sample (termed sample for short) of individuals from within a statistical population to estimate characteristics of the whole population ef1df64788

The term "survey" may refer to many different types or techniques of observation. In survey sampling it most often involves a questionnaire used to measure the characteristics and/or attitudes of people. Different ways of contacting members of a sample once they have been selected is the subject of survey data collection. The purpose of sampling is to reduce the cost and/or the amount of work that it would take to survey the entire target population. A survey that measures the entire target population is called a census. A sample refers to a group or section of a population from which information is to be obtained. ef1df64788 Deff ef1df64788 , then the sample was selected in a way that is just as good as if people were picked randomly.
