Conservative force B. Equivalently, if a particle travels in a closed loop, the total work done (the sum of the force acting along the path multiplied by the displacement) by a conservative force is zero. Tom W. WILEY-VCH 2005. Klassische Mechanik. Kibble, Frank H. Dynamo Theory, Rüdiger and Hollerbach, page 178, Web link Friedhelm Kuypers. Page 9. Berkshire In physics, a conservative force is a force with the property that the total work done by the force in moving a particle between two points is independent of the path taken ffd068d854

A conservative force depends only on the position of the object. If a force is conservative, it is possible to assign a numerical value for the potential at any point and conversely, when an object moves from one location to another, the force changes the potential energy of the object by an amount that does not depend on the path taken, contributing to the mechanical energy and the overall conservation of energy. If the force is not conservative... ffd068d854
