"reversible" energy transfer can be measured at a very small temperature. In thermodynamics, entropy is a numerical quantity that shows that many physical processes can go in only one direction in time. The word 'entropy' has entered popular usage to refer to a lack of order or predictability, or of a gradual decline into disorder. For example, cream and coffee can be mixed together, but cannot be "unmixed"; a piece of wood can be burned, but cannot be "unburned". is no longer a particular value of T ; at which energy is transferred

VDSL offers speeds of up to 52 Mbit/s downstream and 16 Mbit/s upstream, over a single twisted pair of copper wires using the frequency band from 25 kHz to 12 MHz. These rates mean that VDSL is capable of supporting applications such as high-definition television, as well as telephone services (voice over IP) and general Internet access, over a single connection. VDSL is deployed over existing wiring used for analog telephone service and lower-speed DSL connections. This standard was approved

Some traits are part of an organism's physical appearance, such as eye color or height. Other sorts of traits are not easily seen and include blood types or resistance to diseases. Some traits are inherited through genes, which is the reason why tall and thin people tend to have tall and thin children. Other traits come from

Introduction to genetics The way our genes and environment interact to produce a trait Genetics is the study of genes and tries to explain what they are and how they work. Genetics tries to identify which traits are inherited and to explain how these traits are passed from generation to generation. so a child who inherited the tendency of being tall will still be short if poorly nourished. Genes are how living organisms inherit features or traits from their ancestors; for example, children usually look like their parents because they have inherited their parents' genes aa431e4f8a

It is the first book in the publisher An Introduction to Animals and Political Theory is a 2010 textbook by the British political theorist Alasdair Cochrane. It is the first book in the publisher Palgrave Macmillan's Animal Ethics Series, edited by Andrew Linzey and Priscilla Cohn. Cochrane's book examines five schools of political theory—utilitarianism, liberalism, communitarianism, Marxism and feminism—and their respective relationships with questions concerning animal rights and the political status of (non-human) animals.
