, is the probability of obtaining a result at least as extreme, given that the null hypothesis is true. The result is said to be statistically significant, by the standards of the study, when α is the probability of the study rejecting the null hypothesis, given that the null hypothesis is true; and the p-value of a result, p

Animal testing Animal testing, also known as animal experimentation, animal research, and in vivo testing, is the use of animals, as model organisms, in experiments Animal testing, also known as animal experimentation, animal research, and in vivo testing, is the use of animals, as model organisms, in experiments that seek answers to scientific and medical questions. Experimental research with animals is usually conducted in universities, medical schools, pharmaceutical companies, defense establishments, and commercial facilities that provide animal-testing services to the industry. The focus of animal testing varies on a continuum from pure research, focusing on developing fundamental knowledge of an organism, to applied research, which may focus on answering some questions of great practical importance, such as finding a cure for. Bayesian inference 1214/aos/1176345877.). Statistics. doi:10. Bayesian inference is an important technique in statistics, and especially in mathematical statistics. Lehmann, Erich (1986). In the philosophy of decision theory, Bayesian inference is closely related to subjective probability, often called "Bayesian probability. Bayesian inference has found application in a wide range of activities, including science, engineering, philosophy, medicine, sport, and law. Fundamentally, Bayesian inference uses a prior distribution to estimate posterior probabilities. Bayesian updating is particularly important in the dynamic analysis of a sequence of data. 309 of Chapter 6 Bayesian inference (BAY-zee-ən or BAY-zhən) is a method of statistical inference in which Bayes' theorem is used to calculate a probability of a hypothesis, given prior evidence, and update it as more information becomes available. 10 (3): 868–881.
