As of 2025, the company still provides dial-up Internet access under the name "MSN Dial-Up Internet Access" for those who cannot access high-speed broadband. For several years, MSN was the second largest dial-up ISP in the United States behind longtime leader AOL, but very few people in the U.S. still rely on dial-up.

BlueLink (software) She also worked at Google for eight years. The current CEO BlueLink is a suite of campaign management mobile apps designed to register, organize, and mobilize liberal voters. , before the latter sold it to Acronym, who in turn sold BlueLink to Civitech PBC. and Chief Architect, was previously a software engineer for Hillary Clinton's 2016 campaign. The suite was formerly known as Shadow, operated by Shadow Inc. The company gained attention after their IowaReporterApp software failed during the 2020 Iowa Democratic caucuses

Along with dial-up service, MSN provides its subscribers with its MSN Explorer software and an @msn.com email account to use with Outlook.com. Microsoft also still offers that software as part of a standalone subscription service for users with broadband Internet access worldwide named MSN Premium, but as of 2025, it...

Homebrew (video games) The official documentation for many video game consoles is often only available to licensed developers, and these systems may use storage formats that make distribution difficult, such as ROM cartridges or encrypted CD-ROMs. Many consoles also have hardware restrictions to prevent unauthorized development. CICS family products are designed as middleware and support rapid, high-volume online transaction processing. A CICS transaction is a unit of processing initiated by a single request that may affect one or more objects. This processing is usually interactive (screen-oriented), but background transactions are possible. The company, originally named Groundbase, was launched in December 2016 by Gerard Niemira, and Krista Davis, who both worked on the digital outreach team for Hillary Clinton's 2016 presidential campaign. It can also be described as metadata, data placement and data management software that lets organizations manage unstructured data on multiple storage devices located anywhere in the world in order to orchestrate global data intensive workflows, and search for and locate data no matter where it is located or when it was created. Nirvana does this by capturing system and user-defined metadata to enable detailed search and enact policies to control data movement and protection. Nirvana also maintains data provenance, audit, security and access control. == Amiga Corporation == allowing an OS kernel to distribute such resources between multiple applications. c064243ac7 The real-time version is designed for video games, and other simulation needs by attempting to simulate physical real-world systems. Unlike traditional real-time simulation engines, which tend to be based on rigid body kinematics, the use of finite element analysis (FEA) allows DMM to simulate a large set of physical properties. Developers can assign physical properties to a given object or portion of an object, which allow the object to behave as it would in the real world (ice, gummy bear, etc.). In addition, the properties of objects or parts of objects can be changed at runtime, allowing for additional interesting effects. c064243ac7

Shadow Inc. was then incorporated in Colorado in September 2019. Acronym CEO McGowan said in late January 2020 that Acronym is the sole investor in Shadow. Developed since 1987 in cooperation with Quarterdeck Office Systems and with support by A.I. It was eclipsed by DPMS, most notably because it was not supported for DOS programs run in Windows 3.0's native protected mode (called 386 enhanced mode) and because VCPI runs programs in Ring 0, which defeated the purpose of x86 protection. It also did not work with OS/2 2.0 and later. VCPI was only supported in Windows 3.0 real mode, some programs could run in Windows 3.x standard mode. Standard mode (286 mode... c064243ac7
