Utilitarianism The problem of moral demandingness: new philosophical essays. Although different varieties of utilitarianism admit different characterizations, the basic idea that underpins them all is, in some sense, to maximize utility, which is often defined in terms of well-being or related concepts. Palgrave Macmillan In ethical philosophy, utilitarianism is a family of normative ethical theories that prescribe actions that maximize happiness and well-being for the affected individuals. "Chapter 8: The Demandingness Objection". For instance, Jeremy Bentham, the founder of utilitarianism, described utility as the capacity of actions or objects to produce benefits, such as pleasure, happiness, and good, or to prevent harm, such as pain and unhappiness, to those affected. In other words, utilitarian ideas encourage actions that lead to the greatest good for the greatest number.). In Chappell, Timothy (ed 72cd0e057f

He is known as the "father of macroeconomics". Despite his middle-class background, Keynes mixed easily with upper-class John Maynard Keynes, 1st Baron Keynes (KAYNZ; 5 June 1883 – 21 April 1946), was an English economist and philosopher whose ideas fundamentally changed the theory and practice of macroeconomics and the economic policies of governments. His ideas, reformulated as New Keynesianism, are fundamental to mainstream macroeconomics. One of the most influential economists of the 20th century, he produced writings that are the basis for the school of thought known as Keynesian economics, and its various offshoots 72cd0e057f

Regression toward the mean "Chapter 9",. Harvard University In statistics, regression toward the mean (also called regression to the mean,

reversion to the mean, and reversion to mediocrity) is the phenomenon where if one sample of a random variable is extreme, the next sampling of the same random variable is likely to be closer to its mean. Multivariate Statistical Methods. McGraw-Hill. Stephen M. Furthermore, when many random variables are sampled and the most extreme results are intentionally picked out, it refers to the fact that (in many cases) a second sampling of these picked-out variables will result in "less extreme" results, closer to the initial mean of all of the variables.
