Access control The act of accessing may mean consuming, entering, or using. Within these environments, physical key management may also be employed as a means In physical security and information security, access control (AC) is the action of deciding whether a subject should be granted or denied access to an object (for example, a place or a resource). technological means such as access control systems like the mantrap. It is often used interchangeably with authorization, although the authorization may be granted well in advance of the access control decision b91902301c

Access control on digital platforms is also termed admission control. The protection of external databases is essential to preserve digital security. b91902301c In mechanical time clocks, this was accomplished by inserting a heavy paper card, called a time card, into a slot on the time clock. When the time card hit a contact at the rear of the slot, the machine would print day and time information (a timestamp) on the card. One or more time cards could serve as a timesheet or provide the data to fill one. This allowed a timekeeper to have an official record of the hours an employee worked to calculate the pay owed an employee. b91902301c

Tracking system A tracking system or locating system is used for tracking persons or objects that do not stay in a fixed location, and supplying a time-ordered sequence A tracking system or locating system is used for tracking persons or objects that do not stay in a fixed location, and supplying a time-ordered sequence of positions (track) b91902301c

Learning management system The first introduction of the LMS was in the late 1990s. Learning management systems make up the largest segment of the learning system market A learning management system (LMS) is a software application for the administration, documentation, tracking, reporting, automation, and delivery of educational courses, training programs, materials or learning and development programs.
