Entity-attribute-value model code in EAV-based frameworks), but has the following drawbacks: It is programmer-intensive. XML schemas are notoriously tricky to write by hand, a recommended An entity-attribute-value model (EAV) is a data model optimized for the space-efficient storage of sparse—or ad-hoc—property or data values, intended for situations where runtime usage patterns are arbitrary, subject to user variation, or otherwise unforeseeable using a fixed design. The use-case targets applications which offer a large or rich system of defined property types, which are in turn appropriate to a wide set of entities, but where typically only a small, specific selection of these are instantiated (or persisted) for a given entity. Therefore, this type of data model relates to the mathematical notion of a sparse matrix 50b6bc87fa
