

Concrete Construction Engineering Handbook Second Edition Edward G Nawy

Concrete It is the second-most-used substance (after water), the most-widely used building material, and the most-manufactured material in the world. Nawy, Edward G. Earthquake Engineering. Archived from the original (PDF) on 11 January 2012. Concrete Construction Engineering Handbook. (2008). CRC Press Concrete is a composite material composed of aggregate bound together with a fluid cement that cures to a solid over time 86e11a6e34

When aggregate is mixed with dry Portland cement and water, the mixture forms a fluid slurry that can be poured and molded into shape. The cement reacts with the water through a process called hydration, which hardens it after several hours to form a solid matrix that binds the materials together into a durable stone-like material with various uses. This time allows concrete to not only be cast in forms, but also to have a variety of tooled processes performed. The hydration process is exothermic, which means that ambient temperature... 86e11a6e34
