Friction 1798. M. 1098/rstl. 0006 Blundell, S. 88 : 80–102. (2006). Types of friction include dry, fluid, lubricated, skin, and internal – an incomplete list. J. doi:10. , Blundell, K. Concepts in Thermal Physics, Oxford University Press, Oxford UK, ISBN 978-0-19-856769-1 Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. The study of the processes involved is called tribology, and has a history of more than 2000 years 757315d4bd

Friction can have dramatic consequences, as illustrated by the use of friction created by rubbing pieces of wood together to start a fire. Another important consequence of many types of friction can be wear, which may lead to performance degradation or damage to components. It is known that frictional energy losses account for about 20% of the total energy expenditure of the world.
