This allows extensions to the Office applications to be written in CLI compliant languages as well as to use functionality and user interface constructs from Office applications in .NET applications. Extensions to Office prior to Office 2003 only allowed the creation of COM add-ins using Visual Basic or Visual C++ and a "Developer" edition was also offered that enabled VBA developers to create COM Add-ins. 169a3a7c1a == History == 169a3a7c1a == History == 169a3a7c1a

Studio Hibari was founded in July 1979 in Ōizumi by former Tsuchida Production cel-colorist Sachiko Mitsunobu and her husband, anime director Hiroyoshi Mitsunobu. In 1985, the couple's son, Seiji, was appointed managing director of the company. In 1998, the head office moved from Ōizumi to Nerima Ward in Tokyo. The next year, the studio debuted its first television animation production, Sensual Phrase. In 2002, the company moved offices to accommodate for the expansion of departments in order to

integrate them into the company's production system, and Seiji became president of the company; and a year later set up its own 3DCG department. Due to an increase in employees, the digital sections (namely coloring, compositing, and 3D) were moved to another building separate from the head office. The 3D department was incorporated into a separate studio in 2006, which became Larx Entertainment, a wholly owned subsidiary. The next year all of the departments were reallocated into a single building, which has served... 169a3a7c1a VSTO supersedes developer editions of Office 2000 and Office XP for Office development. Microsoft documentation subsequently described Visual InterDev 6.0 functionality as having been integrated into Visual Studio .NET. 169a3a7c1a Many applications require redistributable Visual C++ runtime library packages to function correctly. These packages are frequently installed separately from the applications they support, enabling multiple applications to use the package with only a single installation. These Visual C++ redistributable and runtime packages are mostly installed for standard libraries that many applications use. 169a3a7c1a

integrated debugger works as both a source-level debugger and as a machine-level debugger. Other built-in tools include a code profiler, designer for building GUI applications, web designer, class designer, and database schema designer. It accepts plug-ins that expand the functionality at almost every level—including adding support for source control systems (like Subversion and Git) and adding new toolsets like editors and visual designers for domain-specific languages or toolsets for other aspects of the software development lifecycle (like the Azure DevOps client: Team Explorer). 169a3a7c1a Artspace was originally located at 11 Randle Street, Surry Hills, a former hat factory built in 1912.
