Intermodal container Based on size alone, up to 95% of intermodal containers comply with ISO standards, and can officially be called ISO containers. Intermodal containers are primarily used to store and transport materials and products efficiently and securely in the global containerized intermodal freight transport system, but smaller numbers are in regional use as well. It is like a boxcar that does not have wheels. Forklifts, reach stackers, straddle carriers, container jacks and cranes may be used to load and An intermodal container, often called a shipping container, or a freight container, (or simply "container") is a large metal crate designed and built for intermodal freight transport, meaning these containers can be used across different modes of transport - such as from ships to trains to trucks - without unloading and reloading their cargo. These containers are known by many names: cargo container. and ship by container cranes at container terminals 77a0f992e3

Containerization They can be loaded and unloaded, stacked, transported efficiently over long distances, and transferred from one mode of transport to another—container ships, rail transport flatcars, and semi-trailer trucks—without being opened. Containerization, also referred as container stuffing or container loading, is the process of unitization of cargoes in exports. Containerization, also referred as container stuffing or container Containerization is a system of intermodal freight transport using intermodal containers (also called shipping containers, or ISO containers). The handling system is mechanized so that all handling is done with cranes and special forklift trucks. Containerization is the predominant form of unitization of export cargoes today, as opposed to other systems such as the barge system or palletization. The containers have standardized dimensions. transport using intermodal containers (also called shipping containers, or ISO containers) 77a0f992e3

Thesaurus (information retrieval) ISO 25964, the international standard for information retrieval thesauri, defines In the context of information retrieval, a thesaurus (plural: "thesauri") is a form of controlled vocabulary that seeks to dictate semantic manifestations of metadata in the indexing of content objects. A thesaurus serves to minimise semantic ambiguity by ensuring uniformity and consistency in the storage and retrieval of the manifestations of content objects. ANSI/NISO Z39. preferred term or combination of preferred terms to represent a given subject. 19-2005 defines a content object as "any item that is to be described for inclusion in an information retrieval system, website, or other source of information".
