Management of cerebral palsy A 2013 systematic Over time, the approach to cerebral palsy management has shifted away from narrow attempts to fix individual physical problems – such as spasticity in a particular limb – to making such treatments part of a larger goal of maximizing the person's independence and community engagement. Approximately 60% of people with CP are able to walk independently or with aids at adulthood. Much of childhood therapy is aimed at improving gait and walking. found a trend toward benefit of speech and language therapy for children with cerebral palsy, but noted the need for high quality research. There is. However, the evidence base for the effectiveness of intervention programs reflecting the philosophy of independence has not yet caught up: effective interventions for body structures and functions have a strong evidence base, but evidence is lacking for effective interventions targeted toward participation, environment, or personal factors 8ebb83dea1

Brigham Young University LGBTQ history 2% had reported their gender identity as "transgender or other". BYU is the largest religious university in North America and is the flagship institution of the educational system of the Church of Jesus Christ of Latter-day Saints (LDS Church)—Mormonism's largest denomination. The American Speech-Language-Hearing Association later LGBTQ students and staff have a long, documented history at Brigham Young University (BYU), and have experienced a range of treatment by students and school administrators since its founding in 1875. February – BYU cancels care for transgender clients receiving voice therapy at its speech clinic. Large surveys of over 7,000 BYU students in 2020 and 2017 found that over 13% had marked their sexual orientation as something other than "strictly heterosexual", and another that 0 8ebb83dea1

Amidst the moral and political decadence of the state, Cicero wrote De Oratore to describe the ideal orator and imagine him as a moral guide of the state. He did not intend De Oratore as merely a treatise on rhetoric, but went beyond mere technique to make several... 8ebb83dea1 SPD is often seen in people with other conditions, such as dyspraxia, autism spectrum disorder, or attention deficit hyperactivity disorder (ADHD). Symptoms can include strong reactions to sensory input, difficulty organizing sensory information, and problems with coordination or daily tasks. 8ebb83dea1

Assistive technology ADLs are self-care activities that include toileting,

mobility (ambulation), eating, bathing, dressing, grooming, and personal device care. For example. Assistive technology promotes greater independence by enabling people to perform tasks they were formerly unable to accomplish, or had great difficulty accomplishing, by providing enhancements to, or changing methods of interacting with, the technology needed to accomplish such tasks. Another approach is for the user to present a token to the computer terminal, such as a smart card Assistive technology (AT) is a term for assistive, adaptive, and rehabilitative devices for people with disabilities and the elderly. impairment, examples include web accessibility guidelines. Assistive technology can ameliorate the effects of disabilities that limit the ability to perform ADLs. People with disabilities often have difficulty performing activities of daily living (ADLs) independently, or even with assistance 8ebb83dea1

Brain tumor There are two main types of tumors: malignant (cancerous) tumors and benign (non-cancerous) tumors. Temporal lobe: Tumours in this lobe may contribute to poor memory, loss of hearing, and difficulty in language comprehension A brain tumor (sometimes referred to as brain cancer) occurs when a group of cells within the brain turn cancerous and grow out of control, creating a mass. These can be further classified as primary tumors, which start within the brain, and secondary tumors, which most commonly have spread from tumors located outside the brain, known as brain metastasis tumors. Other symptoms may include difficulty walking, speaking, with sensations, or unconsciousness. All types of brain tumors may produce symptoms that vary depending on the size of the tumor and the part of the brain that is involved. Where symptoms exist, they may include headaches, seizures, problems with vision, vomiting and mental changes. production of speech (Broca's area) 8ebb83dea1

Management of Parkinson's disease practiced treatments for speech disorders associated with Parkinson's disease is the Lee Silverman voice treatment (LSVT). Speech therapy and specifically In the management of Parkinson's disease, due to the chronic nature of Parkinson's disease (PD), a broad-based program is needed that includes patient and family education, support-group services, general wellness maintenance, exercise, and nutrition. At present, no cure for the disease is known, but medications or surgery can provide relief from the symptoms 8ebb83dea1

Video game rehabilitation their goals for their therapy. Methodologies have. Platforms that feature motion control, notably the Nintendo Wii, Microsoft's Xbox Kinect, Sony's Eye Toy, and virtual reality have all been effective in this field of research. 'Meaningful play' emerges from the relationship between player action and system outcome, apparent to the player through, visual, physical and aural feedback. When the goals are not achieved people are generally made to participate in longer therapy sessions, more therapy sessions Video game rehabilitation is a process of using common video game consoles and methodology to target and

improve physical and mental weaknesses through therapeutic processes. Video games are becoming an integral part of occupational therapy practice in acute, rehabilitation, and community settings. The design for video games in rehabilitation is focused on a number of fundamental principles, such as reward, goals, challenge, and meaningful play 8ebb83dea1

Wearable technology Wearable electronic devices are often close to or on the surface of the skin, where they detect, analyze, and transmit information such as vital signs, and/or ambient data and which allow in some cases immediate biofeedback to the wearer. Common types of wearable technology include smartwatches, fitness trackers, and smartglasses. These "smart clothes", "smart underwear", "smart shoes", and smart jewellery Wearable technology is a category of small electronic and mobile devices with wireless communications capability designed to be worn on the human body and are incorporated into gadgets, accessories, or clothes. Wearable devices collect vast amounts of data from users making use of different behavioral and physiological sensors, which monitor their health status and activity levels. Wrist-worn devices include smartwatches with a touchscreen display, while wristbands. from "Smart Clothes" that monitored continuous physiological data from the wearer 8ebb83dea1

Sensory processing disorder Raising a sensory smart Sensory processing disorder (SPD), formerly known as sensory integration dysfunction, is a condition in which the brain has trouble receiving and responding to information from the senses. Peske, N (2005). therapy" (PDF). Sensory Solutions. Retrieved 14 July 2025. People with SPD may be overly sensitive (hypersensitive) or under-responsive (hyposensitive) to sights, sounds, touch, taste, smell, balance, body position, or internal sensations. This can make it difficult to react appropriately to daily situations. Archived from the original (PDF) on 4 March 2016 8ebb83dea1

Expressive aphasia person's speech sounds telegraphic due to poor sentence construction and disjointed words. This is known as "telegraphic speech". The person's intended message may still be understood, but their sentence will not be grammatically correct. For example, a person with expressive aphasia might say "Smart. Expressive aphasia (also known as Broca's aphasia) is a type of aphasia characterized by partial loss of the ability to produce language (spoken, manual, or written), although comprehension generally remains intact. In very severe forms of expressive aphasia, a person may only speak using single word utterances. A person with expressive aphasia will exhibit effortful speech. Speech generally includes important content words but leaves out function words that have more grammatical significance than physical meaning, such as prepositions and articles. Typically, comprehension is mildly to moderately impaired in expressive aphasia due to difficulty 8ebb83dea1

While many medications treat Parkinson's, none actually reverses the

effects of the disease. Furthermore, the gold-standard treatment varies with the disease state. People with Parkinson's, therefore, often must take a variety of medications to manage the disease's symptoms. Several medications currently in development seek to better address motor fluctuations and nonmotor symptoms of PD. However, none is yet on the market with specific... 8ebb83dea1

De Oratore And he gave examples of how speeches given from the knowledge of law and politics De Oratore (On the Orator) is a dialogue written by Cicero in 55 BC. It is set in 91 BC, when Lucius Licinius Crassus dies, just before the Social War and the civil war between Marius and Sulla, during which Marcus Antonius, the other great orator of this dialogue, dies. During this year, the author faces a difficult political situation: after his return from exile in Dyrrachium (modern Albania), his house was destroyed by the gangs of Clodius in a time when violence was common. rebutted Charmadas by quoting passages from the speeches of Demosthenes. This was intertwined with the street politics of Rome 8ebb83dea1

Historically, experiences for BYU students identifying as LGBTQ have included being banned from enrolling due to their romantic attractions in... 8ebb83dea1
