Mesh cells are used as discrete local approximations of the larger domain. Meshes are created by computer algorithms, often with human guidance through a GUI, depending on the complexity of the domain and the type of mesh desired. 83080f2a7d A typical goal is to create a mesh that accurately captures the input domain geometry, with high-quality (well-shaped) cells, and without so many cells as to make subsequent calculations intractable. 83080f2a7d The mesh should also be fine (have small elements) in areas that are important for the subsequent calculations. 83080f2a7d
